LET'S BUILD YOUR LEGACY

Balancing the demands of the industry, your business, and your animals is the daily challenge of agriculture. And we get it, because we're balancing them too. Our team is made up of current and former producers. We work in Ag because we live it. We understand the long days, the tough calls, and the pride that comes with doing things right.

That's why we're committed to delivering system solutions that make your work more manageable, efficient, and productive. Like our all-new ACE Control, a robust platform that seamlessly connects cooling, lighting, and ventilation systems. Or our 60" Panel Blast Fan, American-made with corrosion-resistant stainless steel for unmatched durability. And our Sanitation Station, a must-have for hospital and maternity pens, making it easy to wash boots and support on-farm biosecurity.

Inside this 2026 catalog, you'll find tools and technologies built with your legacy in mind. Solutions designed to support your operation today and help shape the future you're building.

We're ready when you are.

ICONOGRAPHY

You will notice icons next to select products. These graphic identifiers tell you more about each product.

STAFF FAVORITE

Staff Favorite A product recommended by the VES-Artex team based on real-world performance, innovation, reliability, and customer feedback. These solutions are trusted by our experts and frequently selected for results in the field.

Way-finding See the product categories along the side of this page? We'll highlight the category for each page so you can easily find your way through this publication.

Biohazard Deterrent Designed to help reduce the spread of contaminants and support biosecurity protocols. Products marked with this icon are easy to clean, therefore less prone to trapping bacteria. This aids in protecting animal health.

Rebate Available Eligible for manufacturer or program rebates, these products offer a boost to your bottom-line. Check with your VES-Artex representative or dealer for current rebate details and qualification requirements.

Electrical Certifications VES-Artex Products that have the UL Listed icon are approved in Canada and US markets.

CE Indicates that the product may be traded freely in any part of the European Economic Area, regardless of country of origin.

DLC Listed Indicates that a lighting product has been vetted by the DesignLights Consortium for high energy efficiency, performance, and quality, making it eligible for utility rebates.

Restriction of Hazardous Substances in Electrical and Electronic Equipment (RoHS)

EU rules restricting the use of hazardous substances in electrical and electronic equipment to protect the environment and public health.

VENTILATION

WHY IS VENTILATION IMPORTANT?

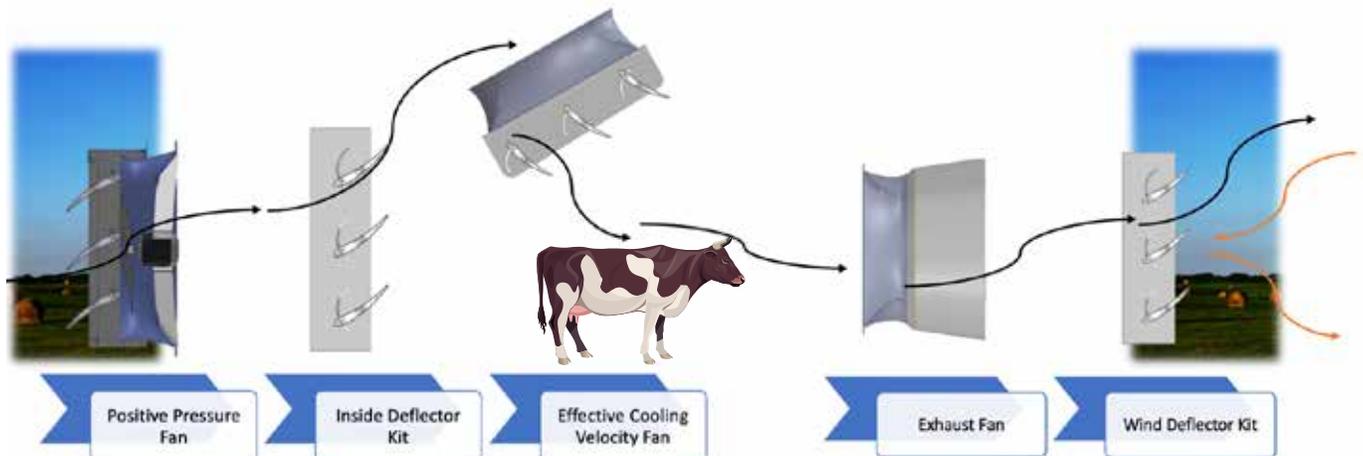

Ventilation plays a critical role in creating a healthy, comfortable, and productive environment for your herd. A well-designed ventilation system helps regulate temperature, humidity, and air quality, all of which directly influence cow comfort, employee working conditions, and overall farm performance.

Effective ventilation removes excess heat, moisture, dust, and airborne contaminants that can otherwise contribute to heat stress, respiratory challenges, and increased disease pressure. By maintaining consistent airflow and fresh air exchange, producers can support healthier cows, improved lying behavior, and more stable feed intake – all key drivers of milk production and reproductive success.

Ventilation is a strategic investment that impacts nearly every aspect of dairy operations. From improving animal health and reproduction to enhancing milk quality and reducing energy inefficiencies, proper ventilation contributes directly to long-term profitability. Understanding how ventilation affects your facility allows you to make informed decisions.

BACK TO THE BASICS

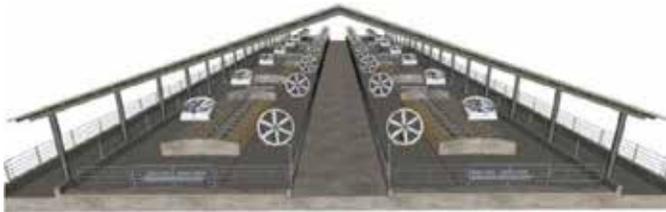

Delivering fresh, clean air at the cow level is fundamental to herd health, comfort, and performance. Effective dairy barn ventilation depends on a balanced strategy that manages how air enters, moves through, and exits the facility. At the core of this strategy are three primary types of fans: inlet, circulation and exhaust.

BARN VENTILATION STRATEGIES

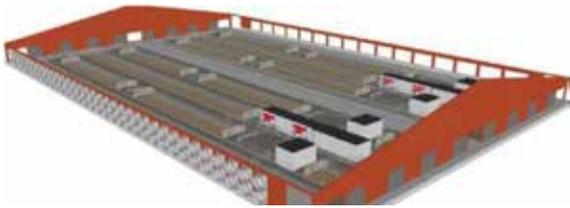

There are three primary approaches to dairy barn ventilation, each with its own advantages and considerations. Selecting the right strategy depends on facility design, climate, herd size, and long-term operational goals.

Assisted Natural Ventilation

Assisted natural ventilation relies on large open sidewalls and a tall roof peak to promote thermal buoyancy, particularly during cold weather conditions. While this approach can be energy efficient, it is heavily dependent on wind and weather patterns, making it difficult to achieve consistent cooling airspeed at the cow level during warm periods. For this reason, circulation fans installed over the stalls are strongly recommended to supplement natural airflow and improve cow comfort year-round.

Cross-Ventilation

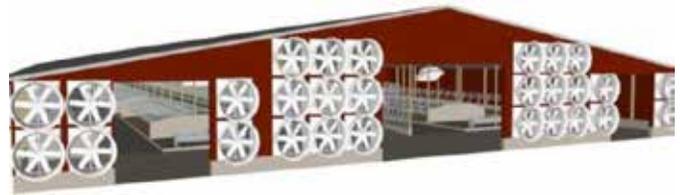

Cross-ventilated barns are one of the most scalable mechanical ventilation solutions available and can significantly reduce the overall footprint of a farmstead. This approach performs exceptionally well during hot weather by delivering uniform airflow across the barn.

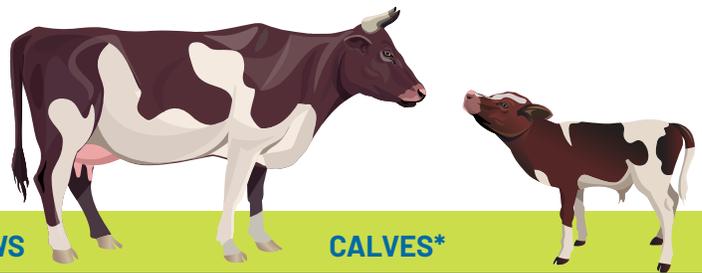

Some designs rely on baffles to create airspeed, which can present challenges during colder months. To address this, newer barn designs often incorporate powered or retractable baffles, allowing producers to maintain airflow control across seasonal conditions.

Tunnel Ventilation

Tunnel ventilation remains one of the most common mechanical ventilation strategies, particularly for barn retrofits. Traditionally designed for high air exchange rates, modern tunnel-ventilated barns are increasingly engineered with lower exchange rates supplemented by strategically placed circulation fans. This approach reduces static pressure while maximizing cooling efficiency—a design philosophy currently recommended by the Dairyland Initiative.

VES-Artex follows the industry standards of air exchange rates to ensure each facility is appropriately ventilated. These standards are posted below:

MINIMUM VENTILATION TARGETS	ADULT COWS	CALVES*
Summer Air Exchange Rate	40 – 60 exchanges/hour	40 exchanges/hour
Winter Air Exchange Rate	4 – 8 exchanges/hour	4 – 8 exchanges/hour
Air Speed at the Cow Level	200 – 400 ft/minute (61 – 122 m/second)	< 60 ft/minute (18 m/minute)

*Calf Note: Avoid creating drafts which is any air moving above 60 ft/minute (18 m/minute) in cold climates.

INLET FANS

VES-Artex Inlet Fans, also known as Positive Pressure Fans (PPF), are engineered to deliver controlled volumes of fresh air into barns, parlors, and holding areas. These fans are especially effective in facilities where passive inlets alone cannot supply adequate airflow. By actively pushing air into the barn, inlet fans help reduce static pressure, improve air distribution, and support a more consistent ventilation strategy.

Built for long-term performance in demanding dairy environments, VES-Artex inlet fans feature durable fiberglass housings, high-performance blades, and powerful motors designed to withstand years of continuous operation.

Automated Operation

All inlet fans are compatible with variable-speed control and can be integrated into an overarching control system. Automation allows airflow to adjust in real time based on temperature, humidity, and environmental conditions—delivering consistent comfort with minimal manual intervention.

Enhanced Cooling Performance

For maximum cooling efficiency, inlet fans can be paired with a high-pressure fogging system. This combination reduces the temperature of incoming air before it reaches the herd, helping alleviate heat stress and maintain optimal cow comfort during warm weather.

Available Configurations

Belt Drive Sizes: 55", 72"

Direct Drive Sizes: 36", 55", 72"

Warranty Coverage

- 10 years on housings and guards
- 10 years on poly blades
- 5 years on steel blades
- 2 years on motors
- 1 year on tie bar shutter
- 1 year on PPF box (actuator motor included)

LOUVERED CIRCULATION FANS

Targeted airflow where it matters most.

Louvered Circulation Fans, also known as Effective Cooling Velocity (ECV) Fans, form the backbone of the VES-Artex ventilation strategy. Designed to deliver high-velocity airflow directly at the cow level, ECV fans use adjustable louvers to precisely aim fresh air where cows feel it most. This targeted cooling helps mitigate heat stress while encouraging longer lying times, improved milk production, stronger conception rates, and overall herd health.

Each ECV fan is engineered for long-term performance in demanding dairy environments. Corrosion-resistant fiberglass housings, balanced aluminum or reinforced polypropylene blades, and heavy-duty hardware ensure reliable operation season after season. Motors are UL Listed and CE certified, available in both 50 and 60 Hz options to meet global installation requirements.

Automate Usage

All louvered circulation fans are capable of variable-speed operation and can be connected to an overarching control system for fully automated ventilation management.

Cooling Power

Pair ECV fans with a high-pressure fogging system to further reduce incoming air temperature and maximize cooling effectiveness at the cow level.

Installation Tip

Recommended spacing for 72" ECV fans is 60' (18.3 m) for optimal airflow coverage.

Mounting Options

- Goal Post Mount – Part #109315
- Chain & Quick Link Hanging Kit (72" ECV / ECVCS)– Part #104394

Warranty

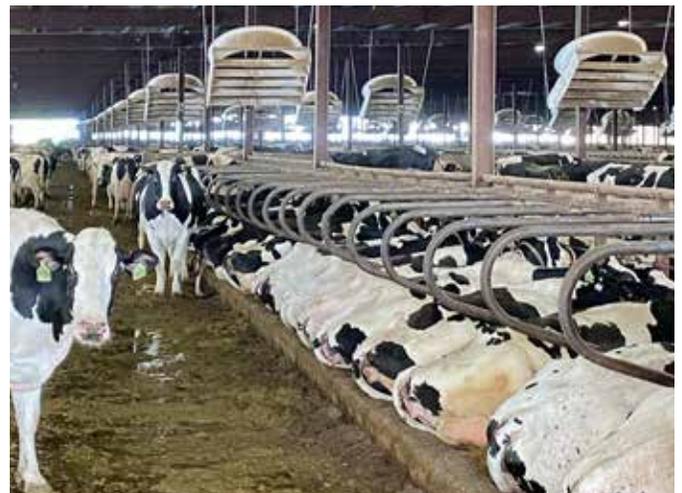

- 10 years on housings, guards, and deflectors
- 10 years on poly blades
- 5 years on steel blades
- 1 year on 36" blades
- 2 years on motors

From the Field

"We have better conception rates, higher yields, and we've produced more milk off the back of having them installed."

–Keith Gue, Huddlestone Farmers

PANEL CIRCULATION FANS

VES-Artex Panel Circulation Fans, also referred to as Blast Fans (BLT), are engineered to deliver reliable, high-velocity airflow that supports cow comfort and barn performance year-round. Available with both belt-drive and direct-drive motors, these fans provide exceptional airspeed at the cow level helping reduce heat stress, control insects, dry bedding, and create a more comfortable environment that supports consistent feed intake and milk production.

Designed for flexible installation, panel circulation fans can be post-mounted or suspended from the ceiling, making them adaptable to a wide range of barn layouts and ventilation strategies.

Built to withstand harsh agricultural environments, each fan features a high-grade, corrosion-resistant fiberglass housing with a thick UV-protective coating to extend service life. Motors are CSA and CSA-US certified, IP66 rated, and available in both 50 Hz and 60 Hz configurations to meet regional and facility-specific requirements.

All VES-Artex panel circulation fans are variable speed capable and can be integrated into an overarching control system. This allows producers to automate fan operation based on temperature, humidity, or environmental conditions—delivering consistent airflow while reducing energy use and labor demands.

Cooling Power

For enhanced cooling performance during warm weather, panel circulation fans can be paired with a high-pressure

fogging system. This combination lowers the temperature of the air delivered to the herd, improving heat abatement and maintaining cow comfort during periods of elevated heat and humidity.

Warranty

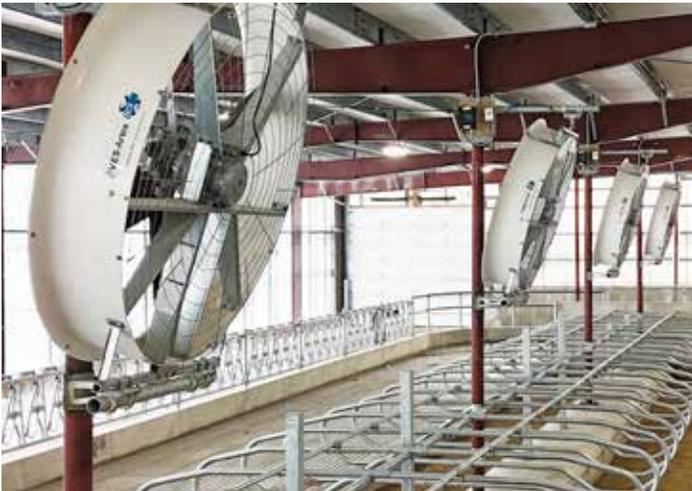

- 10 years on housings and guards
- 10 years on poly blades
- 5 years on steel blades
- 2 years on motors

EXHAUST FANS

Maintaining clean, fresh air while effectively managing moisture is critical to a healthy barn environment. VES-Artex Exhaust Fans are engineered to pull fresh air through inlet openings and expel stale, moisture-laden air through the endwall—supporting consistent airflow, improved air quality, and animal comfort across all seasons.

Designed to perform reliably across a wide range of conditions, these exhaust fans operate efficiently through static pressures ranging from 0.0 to 0.3 inches H₂O. This capability allows them to perform effectively in a variety of ventilation layouts, including tunnel, cross, and assisted natural ventilation systems.

Built for durability, VES-Artex exhaust fans feature a robust, corrosion-resistant fiberglass housing, reinforced fan blades, and OSHA-compliant safety guards. These construction elements ensure long-term performance in demanding agricultural environments where dust, moisture, and temperature extremes are common.

Automated Operation

All VES-Artex exhaust fans are variable speed capable and can be integrated into an overarching control system. Automation allows airflow to adjust dynamically based on temperature, humidity, or barn conditions—delivering consistent ventilation while optimizing energy use and reducing labor demands.

Blade & Drive Options

Exhaust fans are available with poly, aluminum, or galvanized steel blades, allowing producers to select the best material for their environment and performance requirements.

Belt-Drive Exhaust Fans

Equipped with an automatic belt tensioner and an adjustment bracket for easy alignment, belt-drive models offer serviceability and dependable performance over time.

Direct-Drive Exhaust Fans

Direct-drive models feature a fully enclosed motor with sealed bearings, reducing maintenance needs and improving long-term reliability.

All motors are UL Listed and CE certified, ensuring safe, efficient operation and compliance with industry standards.

Warranty

- 10 years on housings, guards, and deflectors
- 10 years on poly blades
- 5 years on steel blades
- 1 year on blades for 12" to 36" size fans
- 2 years on motors

EXHAUST FANS WITH INLET GUARD

VES-Artex Exhaust Fans with roller shutters and inlet guards are designed to improve airflow efficiency and year-round barn comfort. The roller shutter system minimizes airflow obstructions when fans are operating and automatically closes when fans are off, helping maintain consistent indoor conditions without the need for seasonal covers.

During colder months, the roller shutter reduces unwanted drafts and heat loss, supporting stable temperature control and energy efficiency. Built for durability and seamless integration, the VES-Artex Roller Shutter enhances exhaust fan performance in demanding agricultural environments.

Available Options & Compatibility

- 55" Roller Shutter, Part #119011
Compatible with all VES-Artex 55" exhaust fans.
- 72" Roller Shutter, Part #117836
Compatible with AFRV72 exhaust fan in V-housing only.

Key Benefits

- Reduces airflow restriction for improved fan efficiency
- Eliminates the need for winter covers
- Automatically closes when fans are off
- Supports consistent barn temperature and comfort
- Built for long-term performance in harsh environments

Improve Hygiene, Production & Enrichment

Encourage hygiene, milk production, and environmental enrichment for your herd with the Mighty Moo, a powered cow brush from VES-Artex.

- **Durable bristles:** Made from high-quality materials, the bristles are designed to withstand frequent use.
- **Modular components:** Designed for easy assembly and installation, making it simple for your team to set up and integrate into your existing barn infrastructure.
- **Three-year mechanical warranty:** The brush mechanics come with a three-year warranty, providing peace of mind that your investment is protected.

ALUMINUM SHUTTER EXHAUST FANS

The VES-Artex Shutter Exhaust Fan delivers dependable, high-performance ventilation for demanding environments where durability and airflow matter most. Designed for agricultural, horticultural, industrial, and commercial applications, these fans are ideal for factories, warehouses, garages, attics, barns, and greenhouses requiring reliable air exchange.

Built for long-term performance, each fan features corrosion-resistant shutters and a reinforced shutter tie bar that minimizes shutter flapping and prevents unnecessary opening. A fully enclosed CSA/CSA-US approved single-phase motor, precision-machined to less than 0.05 mm tolerance, reduces shaft play and enhances operational stability. Balanced silicon steel rotors minimize vibration and noise, while heavy-duty bearings are engineered to perform in extreme temperatures ranging from -40°F to 284°F.

Moisture-resistant rubber gaskets protect the motor seal, switch, and wiring connections, making these fans well-suited for harsh and humid conditions. Each unit ships fully assembled with a 9' (2.7 m) power cord, allowing for fast, plug-and-play installation—no electrician required.

Available in single-speed or three-speed models, VES-Artex Shutter Exhaust Fans provide flexible airflow control. Single-speed models operate at full output or off, while three-speed models allow low, medium, or high operation to match ventilation demands.

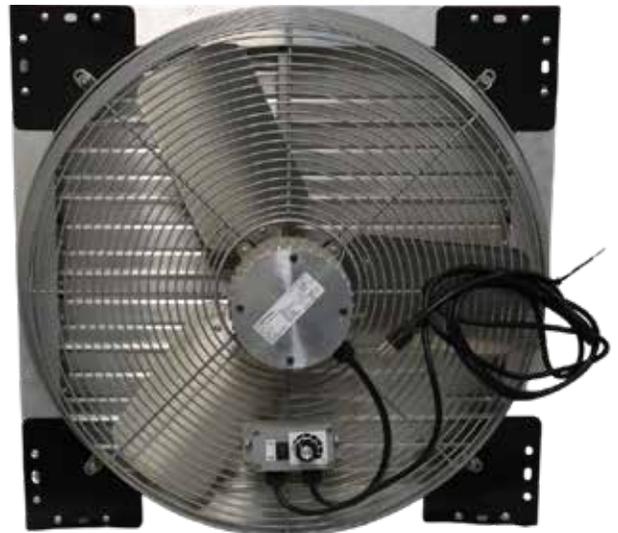

Key Features

- Corrosion-resistant shutters with reinforced tie bar
- Fully enclosed CSA/CSA-US approved single-phase motor
- Precision-machined motor housing for reduced shaft play
- Balanced silicon steel rotors for quieter operation
- Bearings rated for -40°F to 284°F
- Moisture-resistant gaskets on motor, switch, and wiring
- Plug-and-play installation with 9' power cord
- Single-speed or three-speed operation

Safety & Installation

- OSHA-compliant intake safety grill
- Exhaust side must be mounted a minimum of 7' (2.1 m) above ground level

CEILING FANS

VES-Artex Ceiling Fans are engineered to deliver consistent, efficient air circulation in agricultural, industrial, and commercial environments. Designed to move large volumes of air at low speeds, these fans help equalize temperature, reduce heat stress, and improve overall air quality—without creating disruptive drafts.

By gently circulating air throughout the space, ceiling fans support year-round comfort by destratifying warm air in colder months and enhancing evaporative cooling during warmer conditions. This balanced airflow improves cow comfort, reduces moisture buildup, and supports healthier living and working environments.

Built for durability, VES-Artex ceiling fans feature corrosion-resistant components, precision-balanced blades, and high-efficiency motors designed for continuous operation. Variable speed capability allows airflow to be fine-tuned for seasonal and facility-specific

needs, while compatibility with VES-Artex control systems enables automated, energy-efficient operation.

Key Benefits

- Promotes uniform air distribution and temperature balance
- Helps reduce heat stress and moisture accumulation
- Improves air quality and occupant comfort year-round
- Variable speed operation for precise airflow control
- Durable construction for demanding agricultural environments
- Compatible with VES-Artex automation and control systems

Ideal Applications

- Freestall barns and livestock housing
- Holding areas and parlors
- Warehouses and equipment storage
- Industrial and commercial facilities with high ceilings

CEILING FAN CONTROLS

117905 F/R, 5 Speed, controls up to 4 DC ceiling fans.

103421 F/R, Variable Speed, controls up to 3 AC ceiling fans.

103419 Variable Speed, controls up to 3 AC ceiling fans.

103416 Variable Speed, controls up to 10 AC ceiling fans.

Item Number	Description	Motor Type	External Downrod Length	CFM	Wires

GUIDELINES FOR SELECTING A CEILING FAN

Ceiling Height (ft)	Fan Floor Area Coverage (sqft)	Fan Diameter	Recommended Fan
10' - 20'	600 - 1,200	56"	102601 102602 117698 117699 118149
20' +	1,200+	60"	117700 117701 117702

Note: OSHA guidelines require the lowest moving component of a fan must be at least 7' above the ground.

HVLS FANS

The VES-Artex High-Volume, Low-Speed (HVLS) Fan is engineered to deliver powerful, energy-efficient air movement across large interior spaces. Designed for demanding agricultural, industrial, and commercial environments, this HVLS fan creates consistent airflow that improves temperature uniformity, reduces heat stratification, and enhances comfort without high operating costs.

At the core of the system is an external rotor permanent magnet motor, delivering industry-leading torque, efficiency, and long-term reliability. When paired with a VES-Artex analog or wireless VFD, the HVLS fan provides a durable, energy-saving airflow solution built for continuous use.

VES-Artex expanded its HVLS lineup with a new 20-foot, 5-blade HVLS fan, designed to deliver powerful, energy-efficient air movement across large agricultural and

industrial spaces. HVLS fans provide consistent airflow at speeds up to 100 RPM, helping improve temperature uniformity, reduce heat stress, and enhance overall comfort.

Key Features

- High-efficiency HVLS airflow for large spaces
- Precision-balanced blades for smooth, stable operation
- Variable speed control for customized airflow
- Low-noise design
- Heavy-duty construction for continuous operation

Low-Maintenance Design

With no gearbox or oil, and a double-bearing system that is permanently sealed, the VES-Artex HVLS fan is maintenance-free on the drive side. Routine upkeep is limited to wiping dust buildup from the blades approximately every six months to maintain balance and performance.

Item Number	Description
118567	Fan, HVLS, 24ft Z-Tech Fan, 5-Blade, 460V, 3PH, 50/60 Hz, 2.0HP, 3.5A, 55 RPM, VFD Not Included

Mounting Style: Universal I-Beam Clamp. Down rod length: 1'(0.3m). Each purchase includes 4 safety straps with a total strength of 16,000lbs.

HIGH VELOCITY BASKET FANS

VES-Artex High-Velocity Basket Fans deliver focused, high-speed airflow for targeted cooling and air movement in demanding agricultural environments. Designed as powerful circulation fans, they provide immediate air velocity where it's needed most—helping improve comfort, reduce heat stress, and maintain better air quality in high-traffic areas.

Constructed from high-grade steel with zinc plating and a durable powder-coated finish, these basket fans are built to withstand corrosion and continuous use in harsh barn conditions. Sealed motors and precision-balanced silicon steel rotors ensure strong performance with reduced vibration and quieter operation, extending the life of the fan while maintaining consistent airflow.

High-Velocity Basket Fans are ideal as supplemental ventilation in hallways, milking parlors, entrances, offices, and other localized areas where directional air movement is required. Each fan includes a mounting bracket for straightforward installation and is available for convenient online purchase.

Key Benefits

- High-speed, targeted airflow for localized cooling
- Durable, corrosion-resistant steel construction
- Sealed motors designed for agricultural environments
- Reduced vibration and noise through balanced rotors
- Easy installation with included mounting brackets
- Available for online purchase

VES-Artex 18" Moisture-Resistant Basket Fans are plug-and-play circulation solutions designed for harsh agricultural, horticultural, and industrial environments. Built for durability and dependable performance, these fans deliver powerful, focused airflow in areas exposed to moisture, dust, and demanding conditions.

Each fan features a totally enclosed direct-drive motor with sealed bearings, heavy-duty metal construction, and a corrosion-resistant powder-coated finish. Moisture-resistant rubber gaskets protect the switch and wiring connections, helping extend the fan's service life. Approved for outdoor use when connected to a GFI outlet, these fans are well-suited for year-round operation.

Highly versatile, moisture-resistant basket fans can be used in barns, greenhouses, gyms, garages, workshops, and industrial spaces to provide targeted air movement exactly where it's needed. Fans can be operated using the integrated three-speed pull chain or connected to a plug-in thermostat control for automated airflow management.

An adjustable wall and ceiling mounting bracket allows the fan to pivot up to 140°, providing flexible installation and directional control. Each unit includes a 9' (2.7 m) power cord for easy setup.

Key Features

- Plug-and-play design for quick installation
- Totally enclosed direct-drive motor with sealed bearings
- Heavy-duty, powder-coated metal construction
- Moisture-resistant gaskets for switch and wiring protection
- Outdoor-rated for use with GFI outlets
- Three-speed control via pull chain or optional thermostat automation
- Adjustable wall/ceiling mount pivots up to 140°
- Includes 9' power cord

Compliance & Options

- Closed-guard models are OSHA compliant
- Available in black or white
- Open-guard models available (not OSHA compliant)

Birds in livestock facilities pose serious risks—from disease transmission and feed contamination to equipment damage and increased cleaning labor. VES-Artex Bird Blocker is a durable, low-profile mesh system designed to keep birds out of barns without restricting airflow or natural light.

Engineered specifically for agricultural environments, Bird Blocker installs easily in ridge openings, sidewall gaps, and other common bird entry points. The heavy-duty mesh creates an effective physical barrier while maintaining proper ventilation, helping protect herd health and preserve barn cleanliness.

Bird Blocker supports strong biosecurity protocols by reducing exposure to pathogens carried by birds and minimizing feed loss caused by contamination. Its corrosion-resistant materials are built to withstand harsh barn conditions, ensuring long-term performance with minimal maintenance.

Key Benefits

- Prevents birds from entering barns and facilities
- Reduces risk of disease transmission and feed contamination
- Maintains airflow and natural ventilation performance
- Durable, corrosion-resistant construction for long service life
- Low-profile design integrates seamlessly into new or existing barns
- Simple installation with minimal disruption

VES-Artex Bird Blocker is a smart, proactive solution for protecting your facility, improving biosecurity, and maintaining a cleaner, healthier environment for livestock—without compromising ventilation efficiency.

ROLLED CURTAINS

VES-Artex Rolled Curtain Systems give producers precise, reliable control over natural ventilation—working with Mother Nature while allowing you to take control when and where it matters most. Designed to regulate airflow, temperature, and weather exposure, these curtain systems help create a consistent, animal-centered environment year-round.

Manufactured from durable clear poly material, VES-Artex curtains provide excellent protection from wind, rain, snow, and extreme temperatures while still allowing natural daylight into the barn. All system configurations are built using corrosion-resistant aluminum roll tubes, roll tube splices, and top support keder strips to ensure long service life in demanding agricultural environments.

The aluminum extrusion tube and telescoping arm work together to keep the curtain rolling straight and tight—even after years of operation. A direct-drive motor with sealed internal limit switches ensures dependable, precise positioning. Both power and manual drive options are self-braking and can be mounted in fixed or climbing orientations, offering flexible installation across a wide range of facility designs.

Item Number	Width		Length	
	Ft	m	Ft	m
115510	4	1.2	100	30.4
115511	6	1.8	100	30.4
115512	8	2.4	100	30.4

VES-Artex Rolled Curtains can be integrated with automated control systems to provide hands-off ventilation management. For climbing applications, curtain drums utilize wire cables to remove stress from the curtain material, extending system life and performance.

System Configurations

- Top-opening down – single or double roll
- Bottom-opening up – single or double roll

Key Benefits

- Precise control of airflow, temperature, and weather exposure
- Clear poly material allows natural daylight while blocking the elements
- Corrosion-resistant aluminum components for long-term durability
- Direct-drive motor with sealed internal limit switches
- Self-braking power and manual drive options
- Flexible mounting orientations for retrofit or new construction
- Compatible with automated control systems
- Reduced curtain stress in climbing applications

VES-Artex Rolled Curtain Systems deliver dependable performance, flexibility, and longevity—helping producers maintain consistent ventilation, improve animal comfort, and protect their facility in every season.

EC MOTORS

Smarter Power. Precision Control. Less Waste.

EC motors don't just move air, they redefine efficiency.

Built with permanent magnets and advanced onboard electronics, EC (Electronically Commutated) motors convert AC power to DC internally, delivering precise, responsive airflow at any speed. No belts. No slip. No wasted energy.

Unlike traditional AC motors, EC motors operate synchronously, meaning performance stays consistent across a wide operating range. The result? More airflow per watt, instant response to environmental changes, and dramatically lower operating costs.

Why EC Motors Win

- Maximum Efficiency: High efficiency across low, medium, and high speeds.
- Built-In Intelligence: Integrated electronics deliver precise, variable speed control.
- Lower Energy Use: Less power in. More work out.

- Reduced Maintenance: No belts, fewer wear components, longer service life.
- Instant Response: Parallel communication allows faster adjustment to real-world conditions.

When airflow matters – and energy costs do too – EC motors deliver control without compromise.

**This isn't incremental improvement.
It's a smarter way to move air.**

CATTLE HANDLING

CATTLE HANDLING SOLUTIONS BUILT FOR PERFORMANCE AND LONGEVITY

VES-Artex provides a comprehensive range of cattle handling and housing solutions designed to improve cow comfort, enhance workflow efficiency, and withstand the demands of modern livestock facilities. From freestall systems to waterers and handling equipment, each product is engineered with durability, animal welfare, and ease of use in mind.

FREESTALL SYSTEMS & COMPONENTS

VES-Artex freestall systems are engineered using hot-dipped galvanized steel to deliver long-lasting performance in harsh barn environments. Stall dividers, briskets, shoulder bars, and mounting options are designed to promote proper cow positioning, improve lying behavior, and support overall herd comfort. A wide

range of clamps, rails, pipes, posts, and hardware allow systems to be configured for new builds or retrofits.

Feed Fronts & Head Catches

VES-Artex feed fronts and head catches are available in non-locking, self-locking, and quick-release designs, providing safe and efficient access during feeding, health checks, and routine management. Built from high-strength steel, these systems reduce animal stress while improving labor efficiency at the feed line.

Gates, Fencing & Cattle Flow Control

A full lineup of adjustable gates, bifold gates, fences, cattle guards, and head catches allows producers to manage animal movement safely and efficiently. Modular designs make it easy to adapt layouts as herd size or facility needs change, while durable construction ensures long-term reliability.

Flooring, Manure Management & Embedments

VES-Artex manure grates and embedments are engineered to handle heavy traffic while supporting cleanliness and traction. These solutions help improve drainage, reduce buildup, and create safer walking surfaces for both cattle and staff.

Watering Systems

The Aqua Dump Water Trough line delivers reliable access to clean, fresh water with fast-dump cleaning capabilities that reduce labor and improve hygiene. Available in multiple sizes and configurations, Aqua Dumps support hydration needs across pens, crossovers, and high-traffic areas.

Cow Comfort & Enrichment

VES-Artex cow brushes are designed to encourage natural grooming behavior, reduce stress, and improve overall cow well-being. Durable construction and long service life make them a dependable addition to freestall barns and holding areas.

Built to Work Together

All VES-Artex cattle handling products are designed to integrate seamlessly, creating cohesive systems that improve cow comfort, facility efficiency, and long-term durability. Whether outfitting a new barn or upgrading an existing operation, VES-Artex delivers solutions that support productive, well-managed herds.

FINISHES

Built to Last in the Harshest Environments

The finish on cattle handling equipment is not just about appearance, it is critical to long-term durability, animal safety, and corrosion resistance. VES-Artex finishes are engineered to withstand the moisture, manure gases, cleaning chemicals, and daily wear found in livestock facilities.

Every VES-Artex finish is selected to extend service life, reduce maintenance, and protect your investment for years to come.

Hot-Dipped Galvanized Steel

The gold standard for livestock equipment protection. Each component is fully submerged in molten zinc, forming a thick, bonded coating that protects against rust and corrosion, even in high-moisture barns.

- Long-term corrosion resistance
- Protects inside and outside of tubing
- Ideal for dairy, beef, swine, and poultry environments
- Minimal maintenance required

Zinc-Plated Hardware

Used on bolts, fasteners, and accessories where precise fit is required.

- Smooth, clean appearance
- Corrosion protection for indoor livestock use
- Consistent fastening performance

Stainless Steel

For highly corrosive areas such as wash bays, milking parlors, and sanitation zones.

- Maximum corrosion resistance
- Easy to clean and sanitize
- Ideal for high-moisture and chemical wash environments

Powder-Coated Options

Adds an extra layer of protection and visual identification.

- Enhanced surface durability
- Chip-resistant coating
- Custom color options available

Why Finish Matters

- Extends product life
- Reduces replacement and maintenance costs
- Improves safety by preventing sharp rust edges
- Protects your investment in every season

FREESTALLS

FREESTALL SYSTEMS

A dairy cow's day centers around four essential activities: eating and drinking, social interaction, milking, and rest. Rest is especially critical to milk production. Research shows that approximately 882-1,102 lbs (400-500 kg) of blood must flow through the udder to produce just 2.2 lbs (1 kg) of milk.

Simply put, the more time cows spend lying down comfortably, the greater their production potential.

VES-Artex freestall systems are designed to deliver exceptional cow comfort while supporting efficient herd management. With wide-open stall fronts and one of the most open stall designs on the market, these systems provide a welcoming resting space that allows cows to lie naturally in all resting positions while maintaining proper indexing.

Natural resting positions shown from left to right: long, short, wide, narrow.

Built for flexibility, VES-Artex freestalls integrate seamlessly into new construction or retrofit applications. Multiple configurations and mounting options ensure a solution for virtually any barn layout or management style. The result is improved lying time, reduced stress, and a freestall system that supports consistent, long-term production.

FREESTALL DIMENSIONS

Dimension Area	ID on Image@Right	Imperial	Metric
Platform Length	A	180" - 216"	4500mm - 5500mm
Bed Length	B	102" - 108"	2600mm - 2750mm
Shoulder Bar to Curb	C	67.2" - 72"	1720mm - 1830mm
Bed to Shoulder Bar	D	48" - 51.6"	1220mm - 1300mm
Loop to Curb	E	8" - 14"	230mm - 355mm
Stall Width	Not Pictured	47" - 49"	1200mm - 1250mm
Bed Slope	G	2% - 3%	

Open Front

Encourages natural lying and rising behavior by giving cows the freedom to move comfortably when standing up or laying down.

Horizontal Top

Allows precise shoulder bar length adjustments without changing overall divider height—maintaining consistent stall geometry.

Easier Exit

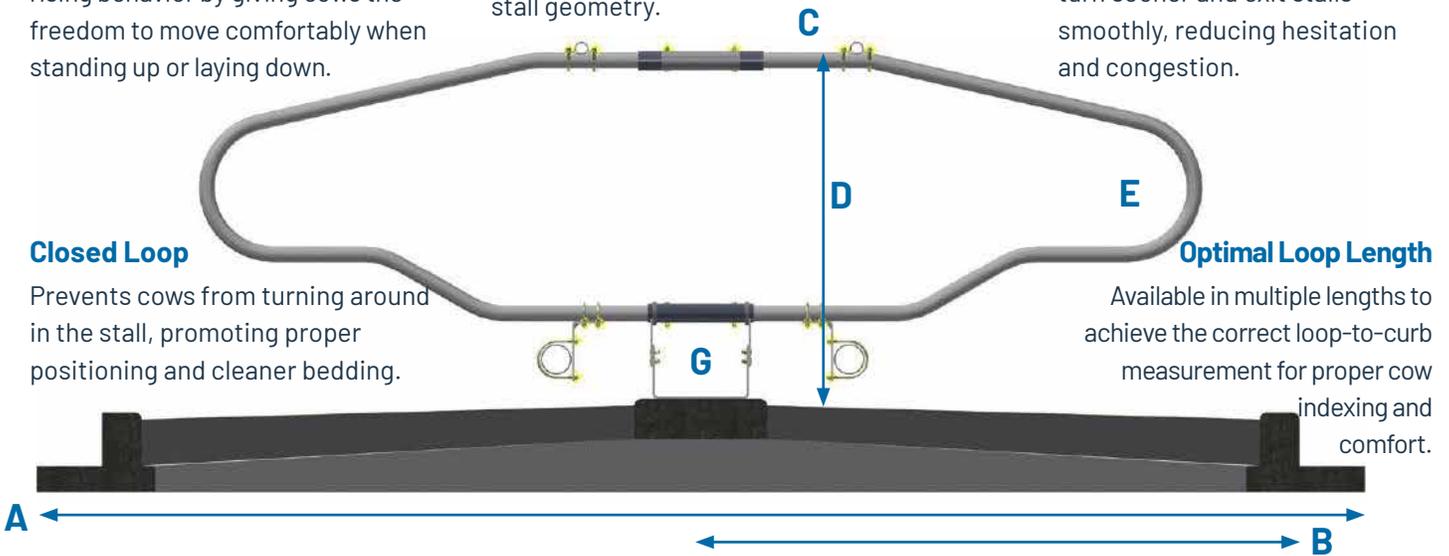

A sloped top design helps cows turn sooner and exit stalls smoothly, reducing hesitation and congestion.

Closed Loop

Prevents cows from turning around in the stall, promoting proper positioning and cleaner bedding.

Optimal Loop Length

Available in multiple lengths to achieve the correct loop-to-curb measurement for proper cow indexing and comfort.

High Cantilever

Creates additional space at the hip and pin bone area, allowing cows to rest more naturally and comfortably.

Low Side Lunge

Provides full 360° head movement for lying, grooming, and side lunging—supporting natural resting behaviors.

Transition Drop

A gradual drop from a higher rear to a lower front helps guide cows into a straight, natural lying position.

BIORAIL FREESTALL MOUNTING SYSTEM

Strength, Flexibility, and Long-Term Performance

The VES-Artex BioRail Freestall Mounting System is our most popular freestall solution. Designed for durability, strength, and adaptability, BioRail delivers a versatile mounting platform that supports long-term cow comfort while simplifying installation and future adjustments.

This twin-rail system allows for both height and width adjustments even after installation, giving producers the flexibility to fine-tune stall dimensions as herd needs change. Whether managing different ages, breeds, or animal sizes within the same facility, BioRail adapts with your operation.

"We were sold on the angularity of the stalls. As cows back up they don't damage or hurt themselves. Forward lunging or side-to-side, there's plenty of room with those BioRails for cows to naturally get up comfortably."

*- Kurt Weirda, General Manager,
Plymouth Dairy Farm and Perry Creek Dairy*

Ideal for sand and compost bedding systems, BioRail keeps all steel mounting components out of the bedding, significantly reducing corrosion risk and extending system life. It also minimizes the need for concrete in the stall area helping reduce construction costs and installation labor.

Key Benefits

- No steel mounts in bedding to reduce corrosion and extend system life
- Mounts directly to building columns, eliminating unnecessary concrete
- Saves on labor and concrete costs during installation
- Wide variety of clamp and mounting options for customized layouts
- Compatible with all bedding types, including sand and compost

BioRail is built for producers who want flexibility today—and adaptability for tomorrow—without compromising durability or cow comfort.

FLOOR MOUNT FREESTALL SYSTEM

FLOOR MOUNT FREESTALL SYSTEM

Open Design. Proven Comfort. Built to Last.

The VES-Artex Floor Mount Freestall System is engineered to support natural cow movement while delivering long-term durability in demanding barn environments. With unobstructed lunge space and open loop geometry, this system allows cows to lie down, rise, and rest comfortably—supporting proper positioning and extended resting time.

Designed to anchor directly into existing concrete, the floor mount system eliminates the need for posts or columns within the stall area. This reduces building complexity, lowers installation costs, and creates a clean, open stall layout. While optimized for use with mattresses, the system is fully compatible with all bedding materials, including deep bedding applications.

Height-adjustable mounting allows producers to tailor

stall dimensions to the age, breed, and size of animals, making this system a flexible solution for both new construction and retrofits.

All components are hot-dipped galvanized and pair seamlessly with VES-Artex stall dividers, ensuring exceptional corrosion resistance, structural integrity, and long service life.

Key Features & Benefits

- Unobstructed lunge space for natural cow movement
- Mounts directly to existing concrete—no posts or columns required
- Compatible with mattresses, deep bedding, and all bedding types
- Height-adjustable for customized stall sizing
- Works with VES-Artex freestall loops and dividers
- Easy installation and long-term durability
- Hot-dipped galvanized for superior corrosion resistance

POST MOUNT FREESTALL SYSTEMS

POST MOUNT FREESTALL SYSTEM

Flexible Installation. Reliable Performance. Built for Any Facility.

The VES-Artex Post Mount Freestall System offers a versatile, cost-effective solution for both new construction and retrofit dairy facilities. Designed to mount directly into concrete, this system provides a stable foundation while allowing height adjustments after installation—giving producers the flexibility to fine-tune stall dimensions as herd needs change.

With compatibility across all VES-Artex stall dividers, the post mount system adapts easily to a wide range of barn layouts. A comprehensive selection of mounting clamps accommodates both round and square posts, making it an ideal choice for facilities with varied structural designs.

Built for long-term performance, all structural components are hot-dipped galvanized to protect against corrosion in high-moisture barn environments. Zinc-plated hardware

comes standard, with stainless steel hardware available upon request for additional durability.

The open front design encourages easy entry and exit, supporting natural cow movement while maintaining proper positioning within the stall.

Key Features & Benefits

- Mounts directly into concrete for a stable, secure installation
- Height-adjustable after installation for customized stall sizing
- Open front design promotes natural cow movement and easy access
- Compatible with all VES-Artex loop styles and stall dividers
- Wide variety of clamp and mount options for round or square posts
- Suitable for all bedding types
- Hot-dipped galvanized components for long service life
- Zinc-plated hardware standard; stainless steel available upon request

Efficient Handling. Faster Workflows. Better Cow Comfort.

Labor is the second-highest operating cost on today's dairy farms, making efficient cattle handling more important than ever. VES-Artex Feed Fronts are engineered to streamline daily management tasks while improving cow comfort and feed access.

With the ability to perform up to 29 of the 31 routine herd management activities directly at the feed bunk, VES-Artex Self-Locking Feed Fronts reduce the need to move animals across the facility. Tasks such as health checks, vaccinations, artificial insemination, pregnancy diagnosis, and routine treatments can all be completed quickly and safely—right where the cow already stands.

Work Smarter at the Bunk

Self-locking feed fronts allow staff to:

- Secure multiple cows at once
- Release the entire group together
- Or restrain individual animals as needed

This flexibility reduces handling time, minimizes stress, and improves overall labor efficiency. By eliminating the need to sort cows as they exit the parlor, VES-Artex feed fronts also help accelerate milking routines and return cows to their pens faster.

Designed for Cow Comfort

Handling cows in a familiar environment while allowing them to eat during treatment creates a calmer, safer experience for both cows and staff. Feed fronts also help:

- Reduce feed bunk competition
- Prevent bullying and crowding
- Ensure equal feed access
- Improve ration intake consistency

The result is healthier cows, improved production, and a more productive facility.

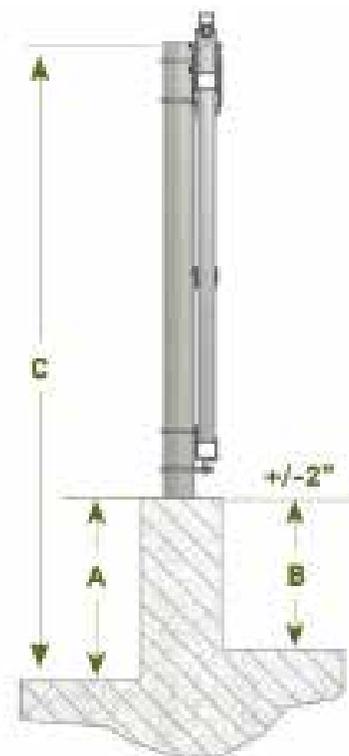

Key Benefits:

- Perform up to 29 routine tasks at the feed bunk
- Reduce labor time and animal movement
- Improve parlor efficiency
- Support low-stress handling
- Optimize feed bunk usage
- Minimize cow competition and bullying
- Improve cow flow and daily productivity

SELF-LOCK RECOMMENDATIONS

Animal*		VES-Artex Self Lock		Installation (See Reference Below)		
Age	Weight	Shoulder Height	Opening	A	B	C
0 to 3 months	VES-Artex recommends using the Sloped or the V-Trainer Feed Fronts for this age group					
3 to 6 months	114 - 186 kg	94 - 104 cm	8 in 3.05 m	30 cm	20 cm	114 cm
	250 - 410 lbs	37 - 41 in	8 in 10 ft	12 in	8 in	45 in
6 to 9 months	186 - 268 kg	104 - 114 cm	7 in 3.05 m	36 cm	25 cm	125 cm
	410 - 590 lbs	41 - 45 in	7 in 10 ft	14 in	10 in	49 in
9 to 14 months	268 - 404 kg	114 - 128 cm	6 in 3.05 m	40 cm	30 cm	140 cm
	590 - 790 lbs	45 - 46 in	6 in 10 ft	16 in	12 in	55 in
14 to 20 months	404 - 540 kg	128 - 142 cm	5 in 3.05 m	40 cm	30 cm	140 cm
	790 - 1,190 lbs	45 - 56 in	5 in 10 ft	16 in	12 in	55 in
20 to 24 months & Jerseys	540 - 612 kg	142 - 145 cm	5 in 3.05 m	46 cm	36 cm	153 cm
	1,190 - 1,350 lbs	56 - 57 in	5 in 10 ft	18 in	14 in	60 in
Cows Holsteins	545 - 726 kg	142 - 152 cm	5 in 3.05 m	46 cm	36 cm	153 cm
	1,200 - 1,600 lbs	56 - 60 in	5 in 10 ft	18 in	14 in	60 in

*All specifications in this chart are based on Holstein cows
 Check with VES-Artex for other Self Lock Lengths for any of these Specific Age Groups
 Self-Locks 12' (3.6m) and longer require a mid-support pole such as 107242.

SLOPED FEEDRAILS & V-TRAINERS

Simple. Durable. Designed to Train and Transition.

Sloped Feedrails and V-Trainers are VES-Artex’s non-locking feed front solutions, engineered to help young or inexperienced animals confidently transition into self-locking feed fronts. By guiding cows and heifers to place their heads through smaller openings, these systems create a smooth learning curve that reduces stress and improves feed bunk behavior.

Built for durability and daily use, both systems promote cow comfort through proper spacing, smooth edges, and

rugged steel construction—making them ideal for training environments and growing herds.

Designed for Your Herd

- Sloped Feedrails: Feature laterally adjustable vertical dividers, allowing producers to customize spacing based on animal size, age, or management style. This flexibility makes sloped feedrails ideal for facilities that house mixed groups or need adaptable layouts.
- V-Trainers: Feature fixed, welded vertical dividers for a robust, maintenance-free design. With no moving parts, V-Trainers offer long-term reliability in high-traffic feeding areas.

SLOPED FEED RAIL SIZES

Length		Number of Openings
Imperial	Metric	
7' 11"	2.41 m	6
7' 11"	2.41 m	7
7' 11"	2.41 m	8
7' 11"	2.41 m	9
9' 8-15/16"	2.97 m	12
9' 8-15/16"	2.97 m	7
9' 11"	3.02 m	8
9' 11"	3.02 m	9
9' 11"	3.02 m	10
9' 11"	3.02 m	12
11' 11"	3.63 m	12
11' 11"	3.63 m	14

Built for Training & Confidence

The V-Trainer is suitable for cows and heifers of all ages, including mature animals, helping them develop confidence at the bunk and preparing them for eventual use of self-locking feed fronts. These systems encourage proper head placement, reduce hesitation, and support smoother transitions between feeding stages.

V-TRAINER SIZES

Length		Number of Openings
Imperial	Metric	
10'	3.04 m	6
10'	3.04 m	8
12'	3.65 m	9

FEED FRONTS

STANDARD SELF LOCKS

**Built for Strength. Designed for Efficiency.
Trusted for Daily Use.**

VES-Artex Standard Self Locks are engineered to help producers work faster, safer, and more efficiently by allowing multiple animals to be restrained at once for health checks, treatments, and routine management.

Constructed with heavier-gauge components, continuous welds, and reinforced bushings, these self-locking feed fronts are built to outperform and outlast similar products on the market—delivering long-term durability and an exceptional return on investment.

Designed for smooth, quiet operation, VES-Artex Standard Self Locks reduce stress on both animals and staff while maintaining consistent, reliable performance in high-traffic feeding areas.

Designed for Smarter Handling

Self locks allow producers to:

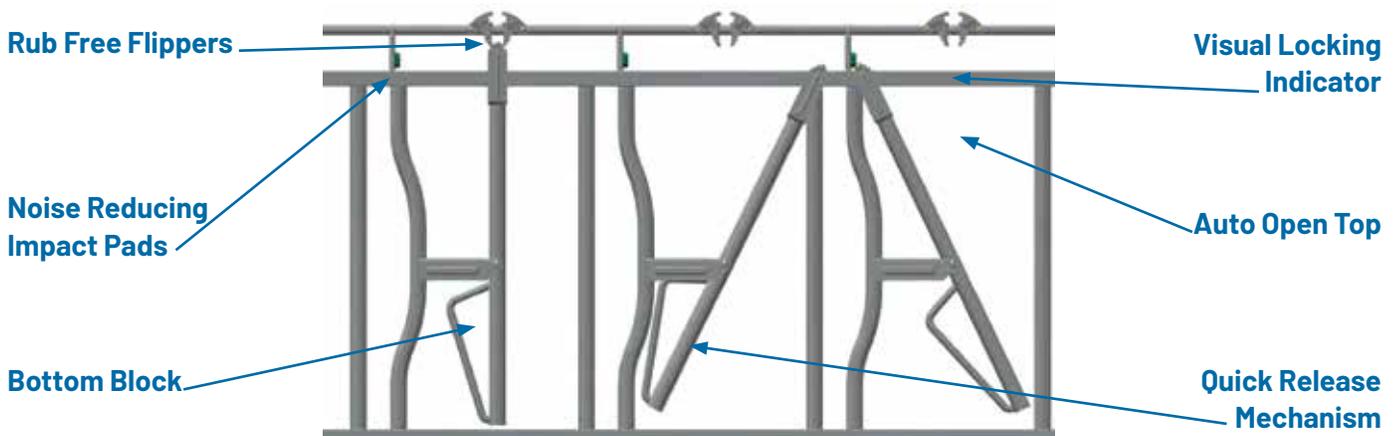

- Secure an entire group at once
- Release cows as a group or individually
- Perform treatments efficiently at the feed bunk

This improves workflow, minimizes animal movement, and reduces labor time.

Standard Features

Every VES-Artex Standard Self Lock includes:

- Rub-free flippers for smooth operation
- Noise-reducing hardware to minimize stress
- Quick-release mechanisms for safe, fast exit
- Individual animal lock-ups
- Auto-open top for effortless engagement
- Bottom blocker to prevent escape
- Visual locking settings for group control
- Hot-dipped galvanized finish for corrosion resistance

MATERNITY/TREATMENT AREA SELF LOCKS

Flexible Support for Special Care

VES-Artex Maternity and Treatment Area Self Locks provide the same strength, durability, and ease of use as our standard self-locking feed fronts—while offering the added flexibility required for cows receiving special care or preparing to calve.

Designed to allow animals the freedom to stand or lie down comfortably, these self locks support low-stress handling during critical moments such as birthing, recovery, and medical treatment. Their smooth operation and secure design help protect both cows and caregivers while maintaining efficient herd management.

For use with VES-Artex gate hinge and latch sold separately - hinge and stub not included in assembly

CURVED SELF-LOCK (CSL)

Designed for Comfort. Built for Confidence.

The VES-Artex Curved Self-Lock (CSL) system is engineered to encourage natural cow movement with a large, inviting opening and an ergonomically curved top rail that mirrors the shape of a cow's head. This thoughtful design makes entry easier, reduces hesitation, and improves overall flow at the feed bunk.

With the widest opening in the VES-Artex lineup, approximately 20% larger than the Standard Self Lock Series, the CSL is ideal for mature cows and high-traffic feeding areas. Available in multiple panel lengths, this system provides flexibility to fit your herd and facility.

Built on the same trusted platform as our Standard Self Locks, the CSL offers all the same durability, safety, and handling features—enhanced with comfort-driven design.

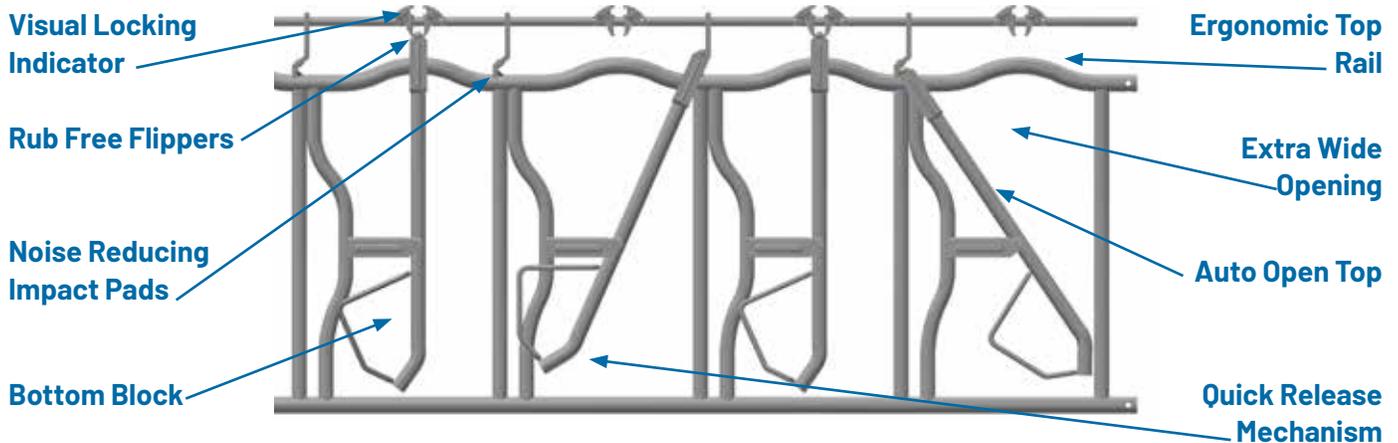

Smart Connection

The CSL comes standard with a round control rod featuring the SMART Control Rod Connector, delivering the same precise, easy-to-use connection found with square control rod systems. This design simplifies installation, improves alignment, and allows for quick replacement thus saving time in the field.

- Ergonomic curved top rail for natural head positioning
- Largest opening, approximately 20% wider
- Encourages smooth entry and improved cow flow
- SMART Control Rod Connector for fast, accurate installation

HEAVY-DUTY SELF-LOCK (HSL)

Built for Strength. Engineered for Long Runs.

The VES-Artex Heavy-Duty Self-Lock (HSL) system is designed for demanding applications where strength, stability, and extended feed bunk spans are required. Featuring 2.75" (70 mm) square top and bottom rails, this system delivers exceptional structural rigidity—allowing runs of up to 20 ft (6 m) before an intermediate post is needed.

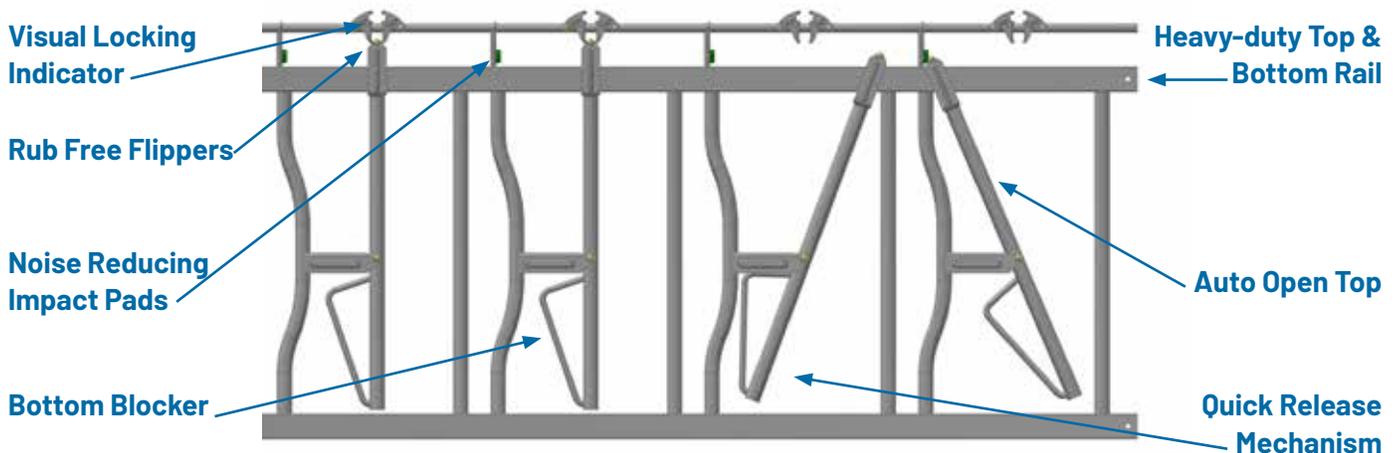

Ideal for high-traffic feeding areas and facilities utilizing feed stalls, the HSL offers the same trusted performance as our Standard Self Locks—enhanced with heavy-duty construction for added durability and reduced structural support requirements.

Standard Features

- 2.75" (70 mm) heavy-duty top rail for superior strength
- 2.75" (70 mm) heavy-duty bottom rail for added stability
- Supports long runs—up to 20 ft (6 m) between posts
- Easy connection for feed stall applications
- Fewer intermediate posts required
- Includes all standard VES-Artex self-lock features

HSL STANDARD SIZES

Improve Hygiene, Production & Enrichment

Encourage hygiene, milk production, and environmental enrichment for your herd with the Mighty Moo, a powered cow brush from VES-Artex. The brush automatically rotates when a cow engages with it and can rotate in both clockwise and counter-clockwise directions, ensuring their tail doesn't get stuck. The rocking motion allows the brush to reach where a static brush can't.

- **Durable bristles:** Made from high-quality materials, the bristles are designed to withstand frequent use.
- **Modular components:** Designed for easy assembly and installation, making it simple for your team to set up and integrate into your existing barn infrastructure.
- **Three-year mechanical warranty:** The brush mechanics come with a three-year warranty, providing peace of mind that your investment is protected.

Learn more on page 98.

WIDE SELF-LOCK (WSL)

Extra Room. Easy Entry. Maximum Flexibility.

The VES-Artex Wide Self-Lock (WSL) system is designed to provide extra-wide access for herds that need more space to comfortably enter and exit the feed bunk. With a wider top and bottom opening, the WSL offers a more forgiving fit making it an ideal solution for larger animals, fresh cows, or herds not yet accustomed to self-locking feed fronts.

As the most flexible headlock option in the VES-Artex lineup, the WSL improves cow confidence and reduces hesitation at the bunk, supporting smoother flow and improved feeding behavior.

Built on the same durable platform as our Standard Self Locks, the WSL delivers trusted performance with added comfort and accessibility.

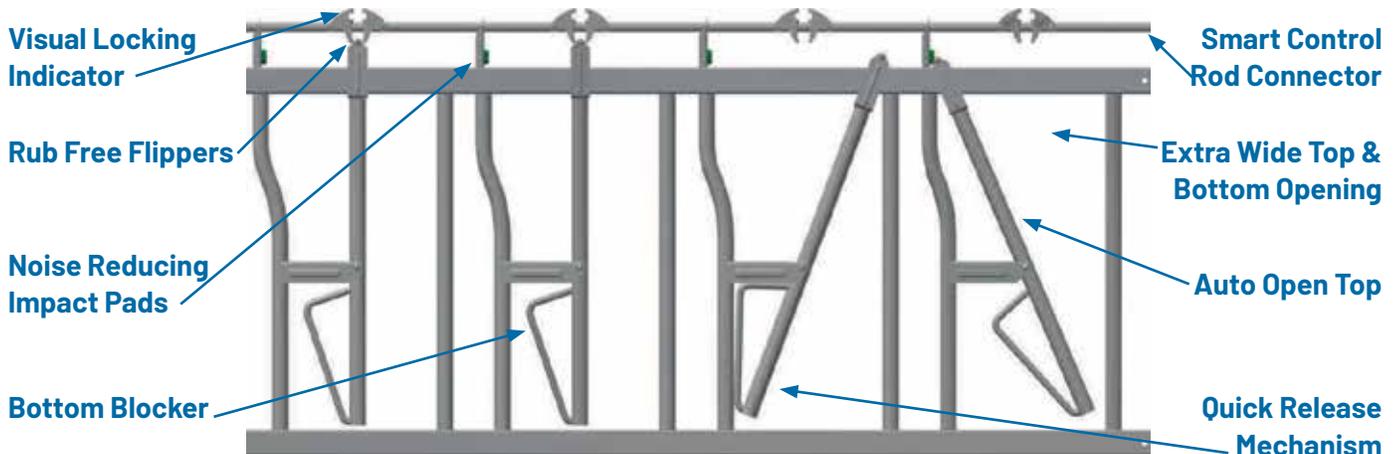

Smart Control Rod Connection

The WSL system features a round control rod with the SMART Control Rod Connector, ensuring fast, accurate installation and easy alignment. This system simplifies setup while allowing quick service and replacement when needed.

- 17" (43 cm) top opening for easy entry
- 17" (43 cm) bottom opening for smooth exit
- Extra-wide design for larger or inexperienced cows
- SMART Control Rod Connector for simple, precise installation
- Includes all standard VES-Artex self-lock features

SMART CONTROL ROD CONNECTOR

Faster Installation. Smarter Connection. Built the VES-Artex Way.

The VES-Artex SMART Control Rod Connector delivers the simplicity installers want with the precision producers depend on. Standard on CSL and WSL Self Lock systems, this innovative design combines the ease of a round control rod with the secure, accurate connection traditionally found only in square rod systems.

No complicated alignment. No wasted time. Just a smarter way to connect.

Why It Matters

- Install Faster: The SMART connector design allows quick, straightforward assembly—reducing installation time and labor costs.
- Precision Performance: Achieve consistent, reliable lock engagement across the entire feed front with a secure, accurate connection.
- Simplified Maintenance: Easier removal and reconnection make adjustments, repairs, and expansions faster and more efficient.
- Built for Real-World Conditions: Engineered to perform in demanding dairy environments with the durability and reliability VES-Artex is known for.

The Bottom Line

Smarter connection. Faster setup. Proven VES-Artex durability.

FEED STALLS

Improve Indexing. Reduce Competition. Maximize Feed Access.

VES-Artex Feed Stalls are designed to further optimize feed bunk utilization by helping cows index properly at the feed front. When paired with self-locking headlocks or feed rails, feed stalls create defined feeding positions—reducing crowding, minimizing bullying, and ensuring every cow has access to her ration.

Built for durability and daily use, feed stalls mount directly to the HSL Self Lock system or feed rails, providing a seamless extension to your feeding setup. Available in pre-galvanized or fully hot-dipped galvanized finishes, VES-Artex feed stalls deliver long-lasting performance in high-moisture barn environments.

The result is improved cow flow, better feed intake consistency, and a calmer feeding environment—supporting both herd health and operational efficiency.

MANURE GRATES

HEAVY-DUTY MANURE GRATES

VES-Artex Manure Grates are engineered to provide safe, reliable crossings while supporting efficient manure management in high-traffic dairy and livestock areas. Designed for durability and animal safety, these grates allow manure to pass through while maintaining secure footing for cattle and equipment.

Constructed with a heavy-duty 4" x 4" angle iron frame, VES-Artex manure grates are built to withstand the weight and movement of skid steers, service vehicles, and livestock without flexing or failure. The 45-degree angled horizontal slats distribute weight evenly, reduce hoof stress, and provide ample traction for cows crossing the grate with confidence.

Available in hot-dipped galvanized or stainless-steel finishes, VES-Artex manure grates deliver long-term corrosion resistance in wet, high-exposure barn environments. Multiple perimeter styles and sizing options ensure compatibility with a wide range of layouts.

Product Details

- Heavy-duty 4" x 4" angle iron framework
- Horizontal slat design for safe animal footing
- 45-degree angled slats for effective load distribution
- Designed for cattle and equipment traffic
- Hot-dipped galvanized or stainless-steel finishes
- Built for long service life in demanding barn conditions

VES-Artex manure grates provide a dependable, low-maintenance solution that improves cleanliness, safety, and efficiency throughout your facility.

EMBEDMENTS

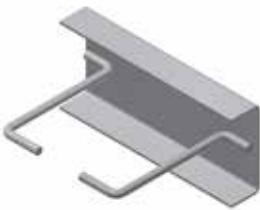

VES-Artex Embedments provide a strong, permanent foundation for cattle handling and freestall systems, ensuring long-term stability in high-stress livestock environments. Designed to be cast directly into concrete, embedments create a secure anchoring point for posts, rails, gates, feed fronts, and other critical barn components.

Manufactured from heavy-gauge steel and finished with hot-dipped galvanization, VES-Artex embedments are

built to resist corrosion, moisture exposure, and chemical wear commonly found in dairy and livestock facilities. Their precision-engineered design ensures proper alignment during installation, helping reduce setup time while delivering consistent structural integrity.

Embedments are ideal for new construction and major renovations for long-term durability, clean installation, and reduced maintenance. By eliminating surface-mounted hardware in high-impact areas, embedments improve safety, appearance, and system longevity throughout the barn.

COW & FLOW MANAGEMENT

Effective cow flow is essential to maintaining calm, efficient movement throughout the barn. VES-Artex Cow & Flow Management solutions are designed to guide cattle naturally, reduce stress, and improve labor efficiency across all areas of the facility—from pens and crossovers to parlors and holding areas.

Built around proven animal behavior principles, these systems encourage smooth, predictable movement while minimizing crowding, hesitation, and bottlenecks. Strategic use of gates, fencing, posts, and control points helps staff direct cows safely and confidently, reducing handling time and improving overall workflow.

Constructed from heavy-duty, hot-dipped galvanized steel, VES-Artex cow flow components are engineered for long-term durability in high-traffic environments. Modular designs allow systems to be customized for each facility and easily adapted as herd size, management style, or barn layout changes.

By improving movement efficiency and reducing handling stress, VES-Artex Cow & Flow Management solutions support better cow comfort, safer working conditions, and more productive daily operations.

- Encourages calm, natural cow movement
- Reduces stress and congestion in high-traffic areas
- Improves labor efficiency and handling safety
- Modular designs for flexible layouts and future changes
- Heavy-duty, corrosion-resistant steel construction
- Seamless integration with VES-Artex cattle handling systems

ADJUSTABLE GATES

VES-Artex Adjustable Gates provide unmatched flexibility for managing cow flow in dynamic dairy and livestock environments. Designed to adapt to changing layouts, herd sizes, and management needs, these gates allow producers to fine-tune spacing without replacing equipment—saving time, labor, and cost.

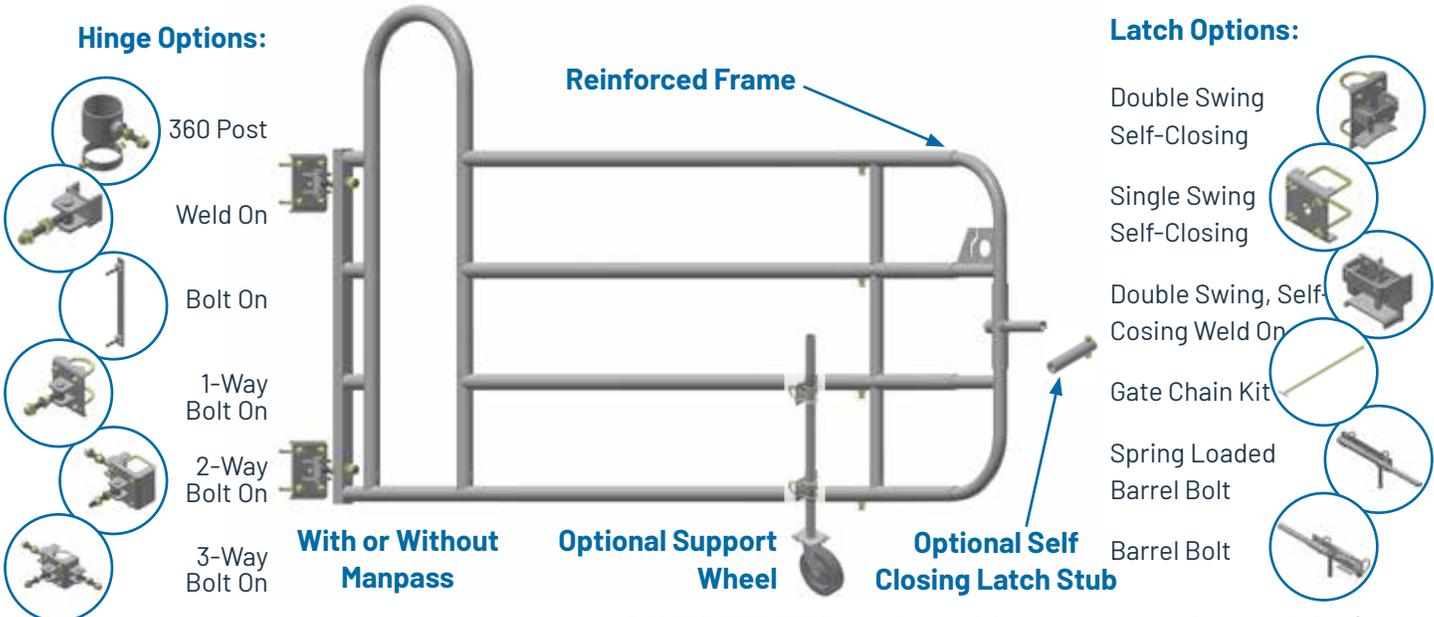

Featuring a telescoping design, VES-Artex adjustable gates expand or contract to fit a wide range of openings, making them ideal for both new construction and retrofit applications. Whether used in alleys, crossovers, holding areas, or pens, these gates deliver reliable containment while allowing smooth, stress-free animal movement.

Constructed from heavy-duty steel tubing and finished

with hot-dipped galvanization, adjustable gates are built to withstand constant animal contact, moisture exposure, and daily operation in demanding barn conditions. Their robust design ensures long service life with minimal maintenance.

- Telescoping design for flexible width adjustment
- Heavy-duty steel construction
- Hot-dipped galvanized for corrosion resistance
- Easy installation and reconfiguration
- Compatible with VES-Artex posts, fencing, and cow flow systems
- Ideal for new builds and retrofit facilities

VES-Artex Adjustable Gates give producers the control they need to manage movement efficiently—supporting safer handling, improved workflow, and long-term operational flexibility.

BI-FOLD GATES

VES-Artex Bi-Fold Gates provide a space-efficient, heavy-duty solution for controlling cow flow in tight or high-traffic areas. Designed to fold inward as they open, bi-fold gates reduce swing radius requirements while maintaining strong, reliable containment—making them ideal for crossovers, alleys, holding areas, and parlors.

Constructed from high-strength steel tubing and finished with hot-dipped galvanization, these gates are built to withstand constant animal contact, moisture, and daily use in demanding livestock environments. The folding design allows for smooth operation and quick adjustments, helping staff direct cattle efficiently without disrupting workflow.

VES-Artex bi-fold gates integrate seamlessly with existing fencing, posts, and cow flow systems. Available in multiple sizes and configurations, they offer flexibility for both new construction and retrofit applications.

- Space-saving bi-fold design for tight layouts
- Heavy-duty steel construction
- Hot-dipped galvanized for corrosion resistance
- Smooth, reliable operation in high-traffic areas
- Compatible with VES-Artex posts, fencing, etc.
- Ideal for crossovers, alleys, parlors, and holding areas

VES-Artex Bi-Fold Gates deliver precise control where space is limited—supporting safe movement, improved labor efficiency, and long-term durability throughout your facility.

FLIP-OVER GATES

VES-Artex Flip-Over Gates offer a simple, efficient solution for controlling cow flow while maintaining quick access for people and equipment. Designed to “flip” up and out of the way, these gates allow staff to move freely through pens and alleys without fully opening or removing a gate—saving time during daily routines.

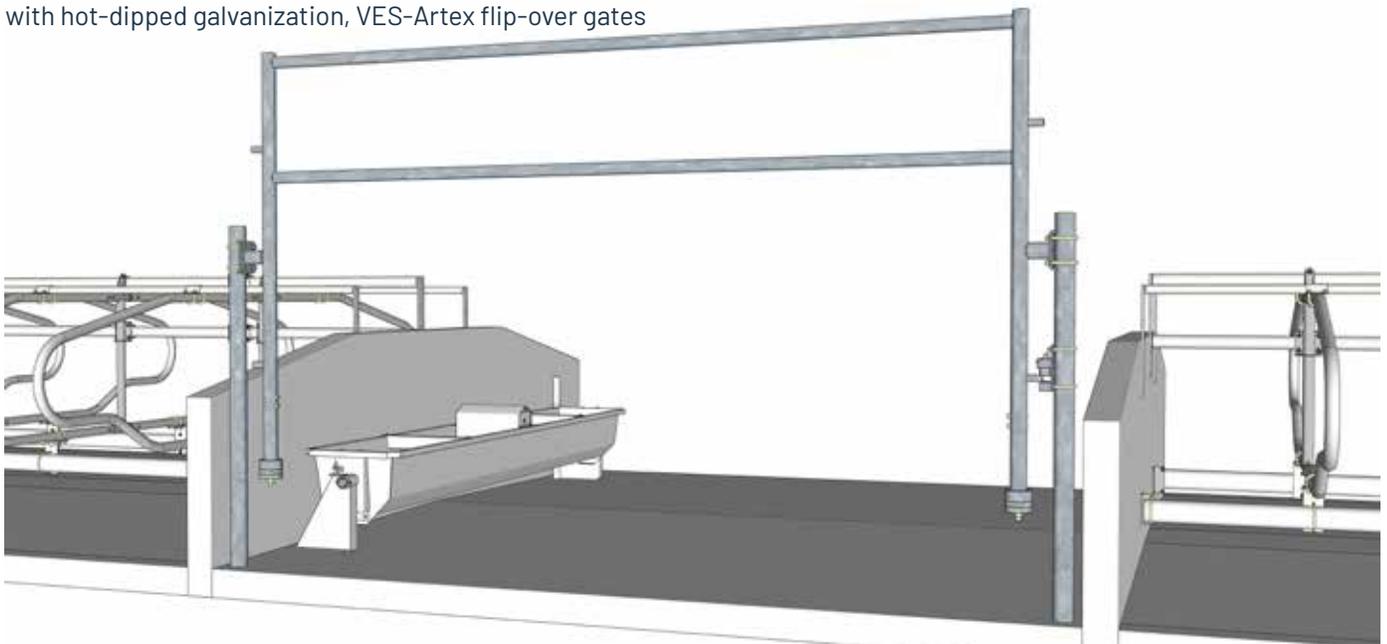

Ideal for crossovers, sorting areas, and employee walk-through points, flip-over gates help maintain consistent cow movement while reducing unnecessary stops and starts. Their intuitive operation supports calm animal behavior and safer handling for barn personnel.

Constructed from heavy-duty steel tubing and finished with hot-dipped galvanization, VES-Artex flip-over gates

are built to withstand constant use, moisture, and harsh barn conditions. The durable hinge design ensures smooth, reliable operation over the long term with minimal maintenance.

- Flip-over design for fast, convenient access
- Heavy-duty steel construction
- Hot-dipped galvanized for corrosion resistance
- Smooth, reliable hinge operation
- Ideal for crossovers, walk-throughs, and sorting areas
- Compatible with VES-Artex posts and fencing systems

VES-Artex Flip-Over Gates deliver practical control and easy access—helping improve workflow, reduce labor, and keep cattle moving efficiently throughout your facility.

FINGER GATES

VES-Artex Finger Gates are designed to guide cow movement efficiently while allowing controlled, one-way flow through key areas of the barn. Commonly used in sorting lanes, crossovers, and return alleys, finger gates help maintain forward motion and reduce hesitation without the need for constant manual intervention.

The flexible finger-style design allows cows to pass through smoothly while discouraging backflow, supporting calm, natural movement and improving overall traffic flow. This makes finger gates especially effective in high-traffic zones where consistency and efficiency are critical.

Constructed from durable, corrosion-resistant materials, VES-Artex finger gates are built to withstand repeated animal contact and daily use in demanding livestock environments. Their simple, low-maintenance design integrates easily with existing gating and fencing systems.

- One-way flow control for improved cow movement
- Flexible finger design to reduce hesitation and stress
- Helps prevent backflow in high-traffic areas
- Durable construction for long service life
- Low-maintenance, easy-to-install design
- Compatible with VES-Artex flow and gating systems

VES-Artex Finger Gates provide a practical solution for directing cattle movement—supporting smoother routines, reduced labor demands, and more efficient barn operation.

ADJUSTABLE FENCING

VES-Artex Adjustable Fencing delivers a flexible, cost-effective solution for managing pens, alleys, and animal flow in dairy and livestock facilities. Designed to adapt as herd size, facility layout, or management needs change, this modular fencing system allows producers to reconfigure spaces without replacing equipment.

Featuring a telescoping design, each fencing section adjusts easily to fit a wide range of openings, making installation fast and future changes simple. Panels are cemented into place without on-site welding, reducing installation time while ensuring long-term structural stability.

All components are constructed from heavy-duty steel and finished with hot-dipped galvanization to resist corrosion in wet, high-traffic barn environments. A wide selection of panels, connectors, and accessories allows the system to be fully customized for each facility.

- Telescoping panels for adjustable width
- Modular design for flexible layouts

- Heavy-duty steel construction
- Hot-dipped galvanized for long service life
- No on-site welding required
- Compatible with VES-Artex gates, posts, and cow flow systems

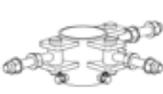

VES-Artex Adjustable Fencing provides durable containment with the flexibility modern operations need—supporting safer handling, efficient workflows, and long-term adaptability.

HEAD CATCHES

VES-Artex Head Catches provide a safe, efficient solution for restraining individual animals during health checks, treatments, and routine management tasks. Designed to minimize stress on cattle while improving handler safety, head catches allow for controlled restraint without the need for additional labor or equipment.

Engineered for durability in demanding livestock environments, VES-Artex head catches are constructed from heavy-duty steel and finished with hot-dipped galvanization to resist corrosion and wear. Their robust design ensures smooth operation and reliable performance, even with frequent use.

Head catches are ideal for use in treatment areas, sorting pens, and handling facilities where quick access and secure restraint are essential. Designed to integrate seamlessly with VES-Artex gating and fencing systems, they support efficient workflows and consistent animal handling.

- Secure, controlled animal restraint
- Heavy-duty steel construction
- Hot-dipped galvanized for long-term durability
- Smooth, reliable operation
- Designed to reduce stress and improve handler safety
- Compatible with VES-Artex cattle handling systems

VES-Artex Head Catches deliver dependable restraint when it matters most—helping producers perform essential tasks efficiently while maintaining animal comfort and safety.

CATTLE GUARDS

CATTLE GUARDS

VES-Artex Cattle Guards provide a safe, effective solution for controlling cattle movement while allowing uninterrupted access for vehicles and/or equipment. Designed to discourage livestock from crossing without the need for gates, cattle guards help maintain secure boundaries and improve traffic flow.

Engineered for strength and long-term performance, VES-Artex cattle guards are constructed from heavy-duty steel components capable of supporting farm vehicles, skid steers, and service traffic. The open-bar design creates a visual and physical deterrent for cattle while maintaining safe, reliable crossings for equipment.

Finished with hot-dipped galvanization for superior corrosion resistance, VES-Artex cattle guards are built to withstand moisture, manure exposure, and year-round outdoor conditions. Available in multiple sizes and configurations, they can be integrated into driveways, laneways, and facility entrances for both new construction and retrofit applications.

- Heavy-duty steel construction for vehicle loads
- Open-bar design discourages livestock crossing
- Hot-dipped galvanized for corrosion resistance
- Allows uninterrupted vehicle access
- Reduces labor associated with gates and fencing
- Ideal for driveways, lanes, and controlled access points

AQUA DUMP WATER TROUGHS

VES-Artex Aqua Dump Water Troughs are designed to deliver consistent access to clean, fresh water while minimizing labor and maintenance in cattle handling areas. Built for durability and ease of use, Aqua Dumps allow producers to quickly empty, clean, and refill troughs helping maintain water quality and support overall herd health.

Unlike traditional water troughs that are slow to drain and difficult to clean, Aqua Dumps feature a fast, controlled dumping mechanism and smooth interior surfaces that prevent dirt, feed, and debris from adhering. This makes routine cleaning faster and more effective, even in high-use areas such as pens, crossovers, and treatment zones.

Aqua Dumps are available in floor-mounted or wall-mounted configurations, with optional leg extensions to position the trough at the optimal drinking height for cattle. Multiple float options and a wide range of sizes allow each system to be tailored to your facility layout and herd size.

Constructed for long service life, Aqua Dumps are offered in hot-dipped galvanized steel and are built to withstand daily use, moisture exposure, and demanding barn environments.

- Fast-dumping design for quick cleaning
- Smooth interior surfaces for improved hygiene
- Floor-mount or wall-mount installation options
- Optional leg extensions for optimal height
- Multiple float configurations available
- Hot-dipped galvanized construction for durability
- Wide range of lengths and capacities

MIGHTY MOO

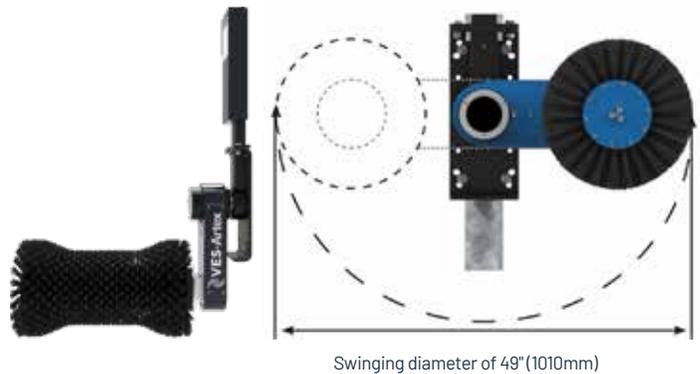

The VES-Artex Mighty Moo Powered Cow Brush is designed to enhance cow comfort, hygiene, and overall well-being through consistent, effective self-grooming. Built for durability and long-term performance, the Mighty Moo encourages natural grooming behavior that helps reduce stress, improve cleanliness, and support herd productivity.

Featuring a horizontal arm design, the Mighty Moo withstands pressure and friction better than traditional vertical brushes, making it ideal for high-use dairy and livestock environments. Its automated rotating mechanism activates when a cow engages with the brush and rotates in both clockwise and counter-clockwise directions, ensuring thorough grooming while preventing tail entanglement and uneven bristle wear.

The brush’s rocking motion allows it to reach key grooming areas—including the head, neck, back, and hindquarters—providing a more complete grooming experience. Constructed with tough, long-lasting bristles, enclosed wiring, and robust gears, the Mighty Moo is engineered to resist heat, vibration, and daily wear without overheating.

By encouraging cows to groom away from headlocks and feed areas, the Mighty Moo also helps reduce manure contamination near the bunk, supporting cleaner feeding zones and improved barn hygiene.

- Automated bi-directional rotating brush
- Horizontal arm design for increased durability
- Rocking motion for full-body grooming

- Heavy-duty bristles for long service life
- Enclosed wiring and robust gear system
- Designed to withstand heat and vibration
- Supports cow comfort, hygiene, and stress reduction

VES-Artex Mighty Moo Powered Cow Brush delivers a reliable, low-maintenance solution that promotes natural behavior, cleaner barns, and healthier, more comfortable cattle.

TECHNICAL INFORMATION	
Brush Frame Dimensions	47 x 32 x 15 inches (1200 x 820 x 390 mm)
Brush diameter	15 inches (390 mm)
Power Supply	110V 60Hz/230V 50Hz
Power usage	0.12kWh
Weight	99 lbs (45 kg)
Brush rotation speed	58 rpm
Movement	Rocking
Direction of Rotation	Clockwise and counter-clockwise
Item Number	118493

EZ MOO STATIC COW BRUSH

Encourage natural self-grooming, improve hygiene, and add enrichment to your facility with the VES-Artex EZ Moo Static Cow Brush. Designed as a non-electrical grooming solution, the EZ Moo provides a durable, low-maintenance option for cattle of all ages.

Built to withstand daily use, the EZ Moo features tough nylon bristles mounted into a metal plate encased in rubber, creating a flexible yet rugged brush that holds up under substantial friction. This construction allows for versatile mounting while maintaining consistent grooming performance in high-traffic areas.

The EZ Moo is easy to install on posts, rails, or walls, making it a practical choice for alleys, crossovers, holding areas, and loafing spaces. Its modular design allows producers to customize brush length and placement based on facility layout and animal needs.

Available as a 16' (5 m) roll or 16" (41 cm) bristle segments, each roll includes cutting marks every 41 cm, allowing for precise sizing. One roll provides 12 individual segments, giving you flexibility to create single grooming points or extended brushing zones.

By encouraging cows to groom naturally, the EZ Moo helps reduce stress, supports cleaner hides, and promotes overall herd comfort—without the need for electricity or moving parts.

- Static, non-electrical cow brush
- Durable nylon bristles set in metal plate encased in rubber
- Designed to withstand heavy friction and daily use
- Easy mounting on posts, rails, or walls
- Modular design for customized brush length
- Ideal for cattle of all ages
- Supports hygiene, enrichment, and cow comfort

Available Components

EZ Moo Bristle Section: 115380

EZ Moo Curved Bracket: 115381

EZ Moo Kit (Two Bristle Sections, One Curved Bracket): 115735

The VES-Artex EZ Moo Static Cow Brush delivers a simple, durable solution for improving animal comfort and enrichment—wherever your cattle need it most.

CALF CARE

Give calves the strongest possible start with VES-Artex Calf Zone Systems, designed to support biosecurity, flexibility, and long-term animal health from day one. Built with both calf comfort and producer efficiency in mind, Calf Zone creates a clean, controlled environment that adapts as calves grow.

Calf Zone pens are engineered to mount directly to structural walls or be configured in stand-alone rows, making them ideal for both new builds and retrofits. Removable sidewalls provide pen-to-pen isolation, helping reduce the risk of disease transmission while allowing for fast, efficient cleaning of entire rows.

As calves mature, the removable wall system allows producers to quickly convert individual pens into shared living spaces, supporting social development without requiring new equipment or major layout changes. This

modular approach gives you flexibility throughout every stage of calf growth.

Each Calf Zone system is fully customizable, with multiple wall lengths, back wall configurations, and optional bucket and bottle holders to fit your facility layout and management style. Durable materials and thoughtful design ensure long service life in demanding barn environments.

By combining hygiene, adaptability, and calf-focused design, VES-Artex Calf Zone Systems help position young animals for healthier, more productive lives—right from the start.

VES-Artex Calf Zone Systems deliver the control, cleanliness, and flexibility needed to raise healthier calves while simplifying daily management.

Modern livestock facilities demand smarter, more efficient ways to manage environmental conditions, labor, and animal comfort. VES-Artex Automation Solutions are designed to give producers greater control, consistency, and confidence—without adding complexity to daily operations.

By automating critical systems such as ventilation, cooling, lighting, and environmental controls, VES-Artex helps reduce labor demands while maintaining optimal conditions around the clock. Automation ensures precise adjustments based on real-time conditions, eliminating guesswork and delivering consistent performance across seasons and facility types.

Whether you're managing a dairy, livestock barn, or specialty facility, VES-Artex automation adapts to your operation—scaling from simple control upgrades to fully integrated systems. Intelligent controls work behind the scenes to optimize airflow, manage temperature and humidity, and improve energy efficiency, all while supporting animal comfort and productivity.

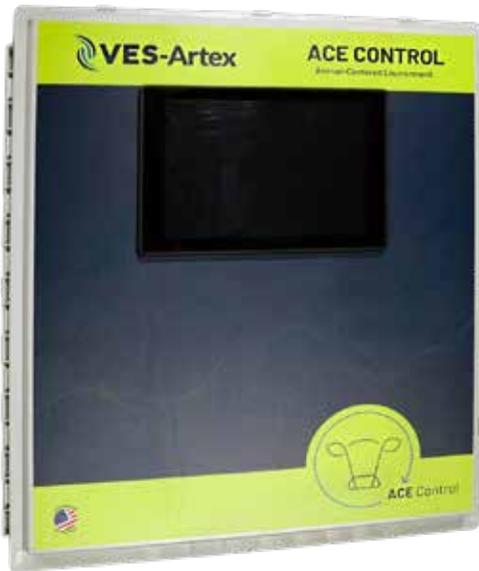

Designed for reliability and ease of use, VES-Artex automation systems integrate seamlessly with existing infrastructure or new builds. The result is a smarter facility that runs more efficiently, protects your investment, and allows your team to focus on what matters most—animal care and operational performance.

Why Automate with VES-Artex?

- Reduces labor demands and manual adjustments
- Improves consistency in barn environments
- Optimizes ventilation, cooling, and lighting performance
- Enhances animal comfort and productivity
- Increases energy efficiency and system reliability
- Scales easily for retrofits or new construction

VES-Artex Automation puts control where it belongs—in your hands—while ensuring your facility performs at its best, every day.

ACE CONTROL PANEL

ACE CONTROL PANEL

The VES-Artex ACE Control Panel is the central command system for modern barn automation—designed to deliver precise environmental control, long-term reliability, and seamless integration across your facility. Built for demanding agricultural environments, ACE provides the intelligence needed to automate ventilation, cooling, lighting, and other critical systems with confidence.

Engineered for flexibility, the ACE Control Panel adapts to a wide range of barn layouts and management styles. Whether upgrading an existing control system or installing automation in a new build, ACE delivers consistent performance through real-time monitoring and responsive control logic. This ensures optimal airflow, temperature, and humidity levels—without constant manual adjustments.

The ACE platform supports variable-speed fans, inlets, exhaust systems, lighting schedules, and environmental sensors, allowing producers to fine-tune conditions at the cow level while improving energy efficiency. Intuitive controls

Features		Power	Adjustable Timing	Auto Function	Manual Function	(2) 500' Zones	7" Touch Screen	Automated Alerts	(4) 500' Zones	Flow Meters Option

make system setup and daily operation straightforward, while advanced automation reduces labor demands and helps protect equipment and livestock year-round.

Designed with serviceability in mind, the ACE Control Panel is built to support long-term system reliability and future expansion. Its robust construction, modern electronics, and compatibility with current and legacy systems make it a dependable solution for facilities focused on performance, consistency, and scalability.

Benefits

- Centralized control for ventilation, cooling, and lighting
- Supports variable-speed fans and automated equipment
- Integrates environmental sensors for real-time adjustments
- Improves consistency and reduces labor demands
- Enhances animal comfort and facility efficiency
- Ideal for retrofits or new construction projects

119613	Remote IO Panel. IO Module Coupler ONLY, adds additional input/outputs in a separate physical location (opposite end of barn)

AUTOFLEX CONNECT II

The VES-Artex AutoFlex Connect II is a powerful, scalable automation controller designed to manage complex barn environments with ease. This platform allows producers to control and monitor up to 16 independent zones per controller, delivering reliable, real-time management across ventilation, heating, cooling, lighting, and curtain systems.

An intuitive user interface enables full system configuration and monitoring through a local 10-inch touchscreen or remotely from any web-enabled device. Operators can view system performance and make adjustments using a smartphone, tablet, or computer: anytime, anywhere.

Built with a modular architecture, the AutoFlex Connect II can be paired with additional AutoFlex controllers to expand alongside facility growth. Interchangeable smart modules support both fixed- and variable-speed fans, heaters, inlets, and curtain machines, allowing each system to be customized to the unique needs of the operation.

With scheduling capabilities, the AutoFlex Connect II automates lighting, cooling, soaking, manure scraping, and feeding events—ensuring consistent performance 24/7/365 while reducing labor demands.

PLUS TOUCH CONTROLLER

The Plus Touch Controller delivers intelligent, sensor-driven automation designed to simplify environmental management in modern livestock facilities. Powered by advanced sensing technology, Plus Touch continuously monitors temperature, humidity, ammonia, carbon dioxide, and other critical barn conditions—then automatically adjusts connected systems to maintain a consistent, healthy environment.

Using real-time data, Plus Touch controls fixed- and variable-stage ventilation fans, curtains, cooling soakers, and heaters, optimizing airflow and climate conditions while reducing manual intervention. Its intuitive interface makes setup and day-to-day management straightforward, supported by built-in diagnostics and automated self-tests to ensure reliable operation.

The system features a 5-inch touchscreen display that provides clear, at-a-glance visibility into barn conditions and system performance. Software updates and configuration changes can be completed quickly via a USB

connection, keeping the system current without complex service requirements.

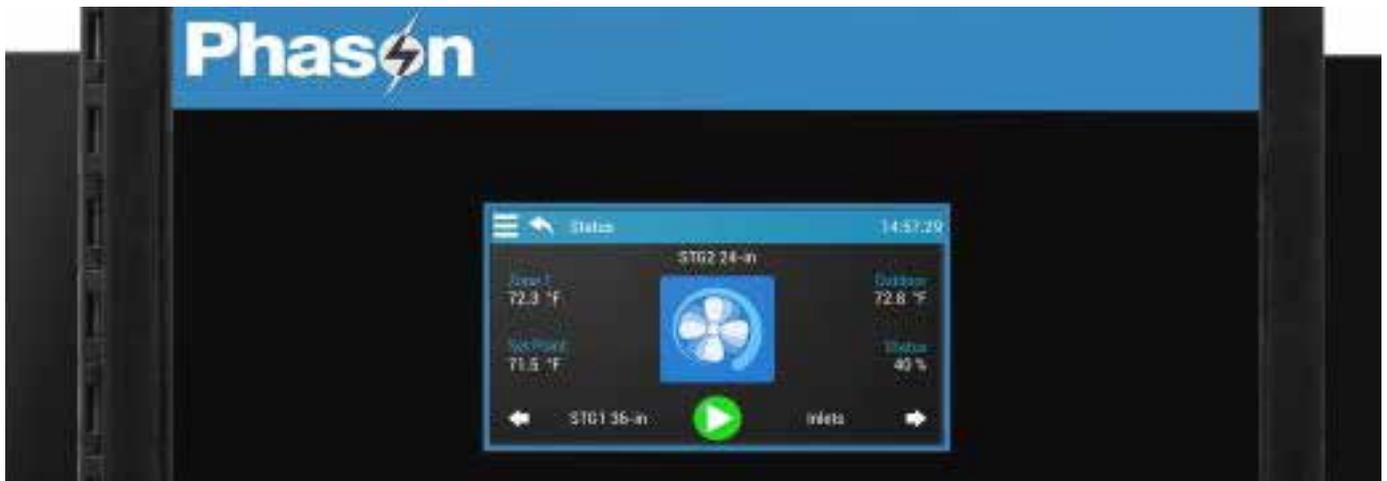

Engineered for durability in agricultural environments, the Plus Touch controller is housed in a corrosion-resistant, water-resistant, fire-retardant enclosure. Additional safeguards include overload protection fuses, six pluggable general-purpose relays, and an alarm relay for connection to external alarm systems—delivering peace of mind alongside performance.

- Monitors temp., humidity, ammonia, CO₂, and more
- Automatically controls fans, curtains, heaters, and cooling systems
- Intuitive setup with onboard diagnostics and self-testing
- 5" touchscreen for clear system visibility
- USB-updatable software
- Durable NEMA 4X-rated enclosure
- Six general-purpose relays plus alarm relay output

SUPRA TOUCH CONTROL

The VES-Artex Supra Touch Control is a powerful, intuitive barn controller designed to automate and optimize ventilation, cooling, heating, and lighting systems in modern dairy and livestock facilities. Built for precision and reliability, Supra Touch continuously monitors environmental conditions such as temperature, humidity, and air quality, automatically adjusting equipment to maintain a consistent, animal-centered environment that supports cow comfort, herd health, and production performance.

The large, easy-to-use touchscreen interface provides real-time system visibility and simple configuration, allowing operators to monitor barn conditions and make adjustments quickly. With flexible staging and variable speed control capabilities, Supra Touch delivers efficient, responsive performance across a wide range of barn designs and ventilation strategies.

Engineered for harsh agricultural environments, Supra Touch features a durable, sealed enclosure and dependable electronics that ensure long-term reliability and consistent operation.

Features and Benefits

- Automated control of fans, curtains, heaters, lights, and cooling systems
- Intuitive touchscreen interface for easy setup and operation
- Continuous monitoring of temperature and environmental conditions
- Supports variable speed and staged ventilation equipment
- Improves cow comfort, air quality, and operational efficiency
- Durable, corrosion-resistant enclosure built for barn environments
- Helps reduce labor while improving environmental consistency

VES-Artex Automation Advantage

Supra Touch integrates seamlessly with VES-Artex ventilation and curtain systems, giving producers complete control over their barn environment while improving efficiency, reducing labor demands, and supporting long-term herd productivity.

SSVDC CONTROL

The VES-Artex SSVDC Control is a dedicated variable speed controller designed to deliver smooth, precise operation of DC ventilation fans in dairy and livestock facilities. Engineered to maximize efficiency and performance, the SSVDC Control allows producers to fine-tune airflow levels to maintain optimal environmental conditions that support cow comfort, herd health, and production.

With responsive speed adjustment, the SSVDC Control ensures consistent air movement while minimizing energy consumption and mechanical stress on equipment. Its simple interface makes operation easy, while its rugged construction ensures reliable performance in harsh agricultural environments.

The SSVDC Control integrates seamlessly with VES-Artex DC circulation and ceiling fans, providing dependable control for both new installations and retrofit applications.

Features and Benefits

- Variable speed control for DC ventilation and circulation fans
- Improves airflow precision for consistent barn environments
- Enhances energy efficiency and reduces operating costs
- Smooth fan ramp-up and operation for quieter performance

- Easy-to-use interface for simple adjustment and control
- Durable construction designed for agricultural environments
- Compatible with VES-Artex DC fan systems

VES-Artex Automation Advantage

By providing accurate, efficient fan control, the SSVDC Control helps producers optimize ventilation performance, reduce energy usage, and maintain an animal-centered environment year-round.

Item Number	Description
117101	Control, Fan, 1 Variable AC Output, 12.5 Amps, FC-1VAC
117102	Control, Fan, 1 Variable AC Output, Includes Temperature Sensor w/1' (300mm) Cable FC-1T-1VAC
117103	Control, Fan, 1 Variable DC Output, Includes Temperature Sensor w/6' (1.8m) Cable FC-1T-1VDC
117104	Control, Fan, 1 Solid State Relay, Includes Temperature Sensor w/6' (1.8m) Cable FC-1T-1F

LDB-2 LIGHT CONTROL

Reliable Lighting Automation for Livestock and Agricultural Facilities

The VES-Artex LDB-2 Light Control is a dependable lighting controller designed to automate and manage barn lighting systems for improved animal performance, worker safety, and operational efficiency. By providing precise control over lighting schedules and intensity, the LDB-2 helps maintain consistent light cycles that support dairy herd productivity, animal comfort, and daily barn routines.

Built for agricultural environments, the LDB-2 Light Control simplifies lighting management by allowing producers to automate on/off cycles or integrate lighting into a broader barn automation strategy. Consistent lighting programs can improve feeding patterns, support reproductive performance, and enhance working conditions throughout the facility.

Its rugged design and straightforward operation make the LDB-2 an ideal solution for both new construction and retrofit installations.

Features and Benefits

- Automates lighting schedules for consistent barn light cycles
- Supports improved animal performance and productivity
- Enhances worker visibility and barn safety
- Easy-to-use control interface for simple operation
- Durable construction designed for agricultural environments

- Compatible with LED, low bay, high bay, and parlor lighting systems
- Ideal for integration into automated barn control strategies

Technical Features

- 120-230 VAC, 50/60Hz
- Independent ramp-up and ramp-down durations
- Two variable AC channels
- Two DC-signal (0 to 10V) channels
- Two internal disconnect relays
- Two light sensor connections
- Light output calibration
- Real-time clock with power-failure settings protection
- Robust construction ensures it is corrosion-resistant, water-resistant, and fire-retardant

VES-Artex Automation Advantage

The LDB-2 Light Control provides reliable, efficient lighting automation that helps create a consistent, productive environment—supporting herd health while reducing manual labor and energy waste.

INTELLIGENT SOAKER PRO PANEL

Precision Soaker Control for Livestock Cooling

The VES-Artex Intelligent Soaker Pro Panel (Part Number: 119092) delivers automated, precision control of livestock soaking systems to help producers effectively manage heat stress and maintain optimal animal comfort. Designed specifically for dairy and livestock facilities, this advanced soaker control panel regulates soaking cycles based on programmed timing and environmental conditions, delivering consistent cooling while conserving water.

By automating soaking intervals and integrating with your barn's ventilation and automation strategy, the Intelligent Soaker Pro Panel helps maximize cooling efficiency, reduce labor demands, and improve overall herd performance. Proper soaking, combined with effective airflow, promotes evaporative cooling at the cow level—supporting feed intake, milk production, and reproductive success.

Built with rugged, farm-ready components, this control panel is engineered to perform reliably in harsh agricultural environments.

Features and Benefits

- Automates livestock soaker systems for consistent, effective cooling
- Helps reduce heat stress and support milk production and animal health
- Programmable soaking intervals for optimal water usage and efficiency
- Integrates with ventilation fans and barn automation systems

- Improves labor efficiency by eliminating manual operation
- Durable enclosure designed for agricultural environments
- Supports expansion and integration with advanced control platforms

Applications

- Dairy freestall barns
- Holding areas and milking parlors
- Feed lanes and headlock areas
- Livestock housing and heat abatement zones

Automation That Works for Your Herd

The Intelligent Soaker Pro Panel is a key component in creating an animal-centered environment—delivering precise cooling control that improves cow comfort, enhances productivity, and supports efficient barn management year-round.

SOAKER CONTROLS

SOAKER LINE CONTROL

Automated Cooling Control for Soaking and Fogging Systems

The VES-Artex Soaker Line Control (Part Number: 102442) provides precise, automated management of evaporative cooling systems to help protect cow comfort and maintain peak herd performance during heat stress conditions. Designed to monitor barn temperatures and activate soaking lines or high-pressure fogging systems automatically, this control ensures cooling cycles operate exactly when needed—reducing labor demands while improving cooling efficiency.

With programmable temperature-based operation and multiple relay stages, this controller delivers reliable performance for soaking, misting, and auxiliary cooling equipment. The rugged, sealed enclosure is built to withstand harsh agricultural environments, making it an ideal solution for dairy barns, livestock facilities, and other agricultural cooling applications.

Flexible monitoring, automation, and remote probe capability allow producers to maintain consistent barn conditions, supporting animal health, milk production, and operational efficiency.

Key Features

- Automates soaking lines, misters, and fogging systems based on temperature
- Two automatic modes: Soaking and Fogging/Mister operation
- Programmable temperature range: 32°F to 113°F (0°C to 45°C)
- Includes 30 ft (9.1 m) temperature probe, extendable up to 500 ft (152 m)
- Optional humidity monitoring with high-humidity bypass
- Six relay stages for controlling solenoids, pumps, or fans
- Durable, sealed enclosure for agricultural environments

VARIABLE FREQUENCY DRIVE (VFD)

Optimize ventilation performance and reduce energy consumption with the VES-Artex Variable Frequency Drive (VFD). Designed to work seamlessly with ventilation control systems, the VFD automatically adjusts fan speed in real time based on barn temperature and environmental conditions—delivering the exact airflow required to maintain ideal cow comfort and air quality.

By eliminating constant full-speed operation, the VFD improves energy efficiency, lowers operating costs, and extends fan and motor life. Automated speed adjustments reduce manual intervention, allowing staff to focus on herd management while ensuring consistent environmental control.

Whether used with circulation fans, exhaust fans, or inlet fans, VES-Artex VFDs provide smooth, reliable, and responsive ventilation control for dairy barns, livestock housing, and agricultural facilities.

Key Benefits

- Automatically adjusts fan speed based on temperature and ventilation demand
- Reduces energy consumption and operating costs
- Improves cow comfort, air quality, and environmental consistency
- Extends motor and fan lifespan through reduced mechanical stress
- Minimizes manual adjustments and labor requirements
- Enables precise airflow control across changing seasonal conditions

VARIABLE FREQUENCY DRIVE

WIRELESS VARIABLE FREQUENCY DRIVE

Precision Wireless Fan Control for Maximum Efficiency and Performance

The VES-Artex Wireless Variable Frequency Drive (VFD) combines advanced Lenze motor technology with VES-Artex ventilation expertise to deliver intelligent, energy-efficient fan control. Designed to work seamlessly with environmental controllers, the wireless VFD automatically adjusts fan speed based on real-time barn conditions—maintaining optimal airflow for cow comfort while significantly reducing energy consumption.

Wireless VFDs provide sensor-less motor control, enabling smooth acceleration and deceleration, dynamic braking, and precise speed regulation without additional sensors. This advanced control capability helps reduce mechanical wear, extend equipment life, and lower operating costs. By ensuring fans run only at the speed required, facilities can reduce energy usage by up to 75%, depending on operating conditions.

Built for demanding agricultural environments, each wireless VFD features a rugged IP66 (NEMA 4X) rated enclosure, protecting internal components from dust, moisture, and corrosive conditions. Integrated Safe Torque Off (STO) functionality enhances maintenance safety by preventing unexpected motor restarts. A USB micro diagnostic interface and compatibility with keypad or WLAN modules provide flexible commissioning, troubleshooting, and system expansion.

Wireless VFDs are a key component of a fully integrated

VES-Artex control system, enabling remote communication, streamlined installation, and scalable automation for modern dairy, livestock, and industrial ventilation systems.

KEY BENEFITS

- Automatically adjusts fan speed based on environmental conditions
- Reduces energy consumption by up to 75%
- Wireless integration for streamlined installation and expansion
- Precise motor control improves efficiency and extends equipment life
- Rugged IP66 (NEMA 4X) enclosure for harsh agricultural environments
- Safe Torque Off (STO) protection enhances maintenance safety

Note: Wireless VFDs are supplied as part of a complete VES-Artex control system. Contact your VES-Artex representative to design a customized solution for your facility.

CLIMATE SENSORS

VES-Artex Climate Sensors are essential components of automated barn control systems, delivering accurate, real-time data that drives smarter ventilation, cooling, and environmental management. Installed at the herd level, these sensors measure critical conditions such as temperature, humidity, and other climate variables—allowing controls to automatically adjust fans, curtains, fogging, and soaking systems to maintain optimal cow comfort.

By monitoring the barn’s true microclimate, climate sensors help create a consistent environment that supports higher milk production, improved fertility, stronger immune response, and overall herd health. Automated adjustments reduce manual intervention while ensuring the facility responds to changing weather and barn conditions.

Built for durability in harsh agricultural environments, VES-Artex Climate Sensors integrate seamlessly with ACE Control Panels and other VES-Artex automation systems, making them suitable for natural, cross, and tunnel ventilated barns as well as retrofit and new construction projects.

KEY BENEFITS

- Provides real-time temperature and climate monitoring at the herd level
- Enables automatic adjustment of ventilation and cooling equipment
- Improves cow comfort, productivity, and herd health
- Supports energy-efficient, automated barn management
- Durable construction for long-term agricultural use
- Compatible with all VES-Artex automation systems

Accurate climate monitoring is the foundation of effective barn automation—helping you create and maintain the ideal environment for your herd year-round.

COOLING

COOLING

Maintaining proper temperature control is essential to protecting herd health, supporting milk production, and ensuring overall facility efficiency. Heat stress can reduce feed intake, fertility, and production while increasing health risks and labor demands. VES-Artex cooling solutions are engineered to help producers create a consistent, animal-centered environment that keeps cattle comfortable and productive—even during the hottest conditions.

Our cooling systems use proven evaporative cooling and soaking strategies to lower effective temperature at the cow level. By combining water application with strategic airflow, these systems help dissipate heat, regulate body temperature, and encourage natural behaviors such as lying time, feeding, and rumination. When integrated with automated controls and ventilation equipment, cooling cycles operate efficiently and precisely based on real-time barn conditions.

VES-Artex offers a complete lineup of cooling components, including high-pressure fogging systems, soaking lines, misting kits, and automated control panels. Each solution is designed for durability, easy integration, and dependable performance in harsh agricultural environments.

Whether used as part of a new installation or retrofit, VES-Artex cooling systems help improve animal welfare, enhance production performance, and reduce labor demands—delivering measurable value to your operation year after year.

Cooling Research

Providing dairy cows with an optimal level of cooling, reduces the total cost of heat stress and its mitigation by an average of 43% across the U.S.

[https://doi.org/10.3168/jds.S0022-0302\(03\)74040-5](https://doi.org/10.3168/jds.S0022-0302(03)74040-5)

Reproductive losses can occur even with the body temperatures of less than 39°C or 102.2°F, over that, conception rates can drop as much as 30%.

<https://doi.org/10.3168/jds.2008-1370>

Heifer calves from uncooled dry cows have lower pre-pubertal growth rates, poorer reproductive performance, and produce less milk in their first lactation than heifers that are from cooled dry cows.

FOUR WAYS OF COW COOLING

Shade Air

Velocity

Water

Time

HIGH-PRESSURE FOGGING SYSTEMS

VES-Artex High-Pressure Fogging Systems provide an effective and energy-efficient method for reducing barn temperatures and improving animal comfort during periods of heat stress. By delivering ultra-fine water droplets that rapidly evaporate in the air, these systems lower the ambient temperature without wetting animals, bedding, or equipment. This evaporative cooling process creates a more comfortable environment that supports feed intake, milk production, reproductive performance, and overall herd health.

Designed for seamless integration into any ventilation strategy, high-pressure fogging systems work in conjunction with circulation, inlet, and exhaust fans to distribute cooled air evenly throughout the facility. When paired with automated controls, fogging cycles activate based on temperature and humidity conditions, ensuring precise cooling while minimizing water and energy use.

Constructed with durable, corrosion-resistant components, VES-Artex fogging systems are engineered to withstand harsh agricultural environments and provide long-term, reliable performance.

Key Benefits

- Reduces barn temperature through efficient evaporative cooling
- Improves cow comfort, production, and reproductive performance
- Minimizes moisture buildup on bedding and flooring

- Reduces heat stress during peak summer conditions
- Integrates easily with automated ventilation and control systems
- Uses less water than soaking

System Features

- High-pressure pumps for ultra-fine fog atomization
- Corrosion-resistant stainless steel and durable plumbing components
- Flexible installation for freestall barns, holding areas, and parlors
- Compatible with VES-Artex ventilation fans and automation controls

Automation Ready

High-Pressure Fogging Systems can be fully integrated with VES-Artex control platforms, allowing automatic operation based on environmental conditions for consistent cooling and optimal efficiency.

Create a Complete Cooling Strategy

For maximum effectiveness, pair VES-Artex High-Pressure Fogging Systems with louvered circulation fans and automated controls to deliver consistent, animal-centered cooling throughout your facility. Work with our team of experts to determine the optimal High-Pressure Fogging solution to maximize your cooling.

FEEDLANE SOAKING SYSTEMS

VES-Artex Feedlane Soaking Systems provide targeted, effective cooling exactly where cows spend a significant portion of their day—at the feed bunk. By applying controlled amounts of water directly to the cow's back and hide, feedlane soaking helps dissipate body heat and reduce core temperature. When combined with proper airflow from circulation fans, this evaporative cooling process delivers immediate and lasting relief from heat stress.

Maintaining cow comfort at the feedlane is essential for preserving feed intake, milk production, and reproductive performance during warm weather. Feedlane soaking encourages cows to remain at the bunk longer, supporting consistent dry matter intake and overall herd productivity while minimizing the negative impacts of heat stress.

VES-Artex Feedlane Soaking Systems are built with durable, corrosion-resistant components and are designed for easy integration into both new and existing facilities. When paired with VES-Artex automation controls, soaking cycles activate automatically based on temperature and humidity conditions—ensuring efficient water use and consistent cooling without requiring manual operation.

Key Benefits

- Reduces heat stress by cooling cows at the feed bunk
- Encourages feed intake and supports milk production
- Improves cow comfort and overall herd health
- Minimizes water waste with controlled soaking cycles
- Supports automated, labor-saving barn management

System Features

- Durable piping and nozzle assemblies designed for agricultural environments
- Uniform water distribution across the feedlane
- Flexible installation for freestall barns and feeding areas
- Compatible with new construction and retrofit applications
- Inlet connector with solenoid, water filter and ball valve
- Galvanized water pipe with pipe connectors
- Anti Drip Nozzles spaced every 5' (1.5 m) along pipe
- Soaker pipe mount bracket
- Environmental controller which adjusts soaking system cycle based on temperature

Automation Ready

Feedlane Soaking Systems integrate seamlessly with VES-Artex control panels, allowing producers to automate cooling cycles based on real-time barn conditions for consistent, efficient performance.

Complete the Cooling Strategy

For maximum effectiveness, combine VES-Artex Feedlane Soaking Systems with circulation fans and ventilation controls to accelerate evaporation and deliver optimal cooling at the cow level.

INTELLIGENT SOAKER SYSTEM

The VES-Artex Intelligent Soaker System delivers precision cooling designed to protect your herd from heat stress while maximizing efficiency and minimizing water use. By combining advanced controls with strategically placed soaking lines, the system automatically applies water at the optimal time and duration to cool cows effectively without over-soaking bedding or walkways.

Unlike manual soaking methods, the Intelligent Soaker uses real-time environmental data to activate cooling cycles based on temperature, humidity, and programmed setpoints. This automated approach ensures cows receive consistent cooling throughout the day, helping maintain feed intake, milk production, and reproductive performance—even during periods of extreme heat.

Built for durability in harsh agricultural environments, the Intelligent Soaker integrates seamlessly with VES-Artex ventilation and automation systems to create a complete, animal-centered cooling strategy. When paired with circulation fans, the soaking process accelerates evaporative cooling, delivering fast, effective relief exactly where cows need it most.

Automation Ready

The Intelligent Soaker integrates with VES-Artex control systems, allowing full automation and coordination with ventilation fans, curtains, and fogging systems for complete environmental management.

Key Benefits

- Automatically cools cows based on real-time barn conditions
- Reduces heat stress, supports milk production and fertility
- Optimizes water usage with precision-controlled soaking cycles
- Eliminates manual operation and reduces labor demands
- Enhances overall cow comfort and herd performance

System Features

- Programmable temperature-based activation and cycle timing
- Durable, corrosion-resistant components for long service life
- Uniform water delivery for consistent cooling coverage
- Flexible installation for feedlanes, holding areas, and freestall barns
- 100 soaking units per 500' (152 m) run
- 5' or 6' (1.5m or 1.8m) spacing between soaking units
- 600' (182 m) total of electrical wiring
- 7' (2.1 m) installation height for Holsteins
- 20-35 PSI of water pressure is required
- Water quality should be tested and treated as needed
- Stainless steel nozzle and tip provide durability

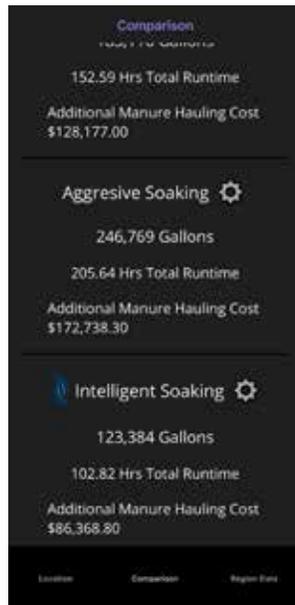

Complete the Cooling Strategy

For maximum efficiency, combine the Intelligent Soaker with VES-Artex circulation fans and automation controls to create a fully integrated, animal-centered environment that keeps cows comfortable and productive year-round.

Item Number	Description
118478	Intelligent Soaker 2.0 5'Kit. Includes LED Harness, Soaking Unit, and Nozzle for (1) Soaking Connection
118479	Intelligent Soaker 2.0 20'Kit. Includes LED Harness, Soaking Unit, and Nozzle for (4) Soaking Connection
118480	Intelligent Soaker 2.0 6'Kit. Includes LED Harness, Soaking Unit, and Nozzle for (1) Soaking Connection
118481	Intelligent Soaker 2.0 24'Kit. Includes LED Harness, Soaking Unit, and Nozzle for (4) Soaking Connection
118482	Intelligent Soaker 2.0 Panel Kit. Includes (2) 100' Extensions and (1) Power Box. Maximum of (2) 500' Zones.
118448	Intelligent Soaker 2.0, Soaking Unit
118477	Soaker Nozzle, for Intelligent Soaker. 1.2GPM. 3 Piece, SS Tip w/Red Orifice, SS Collar, and SS Body. Does Not Include Ball and Spring or Plunger.
118449	Cable Assembly, 5' Intelligent Soaker Section, w/1Nozzle Connection, w/LED Indicator
118450	Cable Assembly, 20' Intelligent Soaker Section, w/1Nozzle Connection, w/LED Indicator
118451	Cable Assembly, 6' Intelligent Soaker Section, w/1Nozzle Connection, w/LED Indicator

SOAKING CALCULATOR APP

VES-Artex has a **Soaking Calculator App** that uses geographical information and historical weather data to provide an estimate for the hours your cows experience heat stress and a comparison of three soaking system options. To deploy, visit your app store on your mobile device and search **VES-Artex Soaking Calculator**.

INTELLIGENT SOAKER PRO PANEL

The VES-Artex Intelligent Soaker Pro Panel (part number 119092) is the command center for advanced evaporative cooling management. Designed to give producers full visibility and control, this intuitive touchscreen interface allows you to monitor, program, and adjust soaking cycles with precision—ensuring cows receive consistent cooling exactly when they need it.

Each Pro Panel includes two 100' extension wire harnesses, enabling control of two zones with up to four 100' Intelligent Soaker runs per zone. This flexible configuration makes it ideal for feedlanes, holding areas, and large freestall barns where targeted cooling is essential.

When paired with a barn temperature and humidity sensor, the Pro Panel automatically adjusts soaking cycles based on real-time environmental conditions—reducing heat stress while optimizing water usage. An external controller can also be integrated for expanded system coordination within your overall ventilation strategy.

Built with internet connectivity in mind, the Intelligent Soaker Pro Panel provides remote access from any smart device. Receive weekly water usage reports via email and monitor system status anytime, anywhere. Integrated water flow meters deliver real-time insight into water volume, temperature, and flow rate—helping you manage performance, efficiency, and sustainability with confidence.

Key Features

- Full-color touchscreen interface for easy programming
- Controls two zones with up to four 100' runs per zone
- Optional temperature and humidity sensor integration
- Remote access and weekly water usage reporting
- Integrated water flow meters for real-time monitoring
- Flexible manual or automated operation modes

Why It Matters

Precision soaking protects milk production, supports reproductive performance, and improves overall cow comfort while reducing labor demands and controlling water consumption. The Intelligent Soaker Pro Panel ensures your cooling strategy is proactive, measurable, and fully aligned with an animal-centered environment.

Custom Fabrication That Keeps Your Project Moving

VES-ARTEX NOW OFFERS IN-HOUSE CUSTOM STEEL FABRICATION

No two dairies are the same. Barn layouts vary, airflow challenges differ, and the right solution often requires more than an off-the-shelf component.

That's why VES-Artex now offers expanded in-house custom steel fabrication, giving producers and dealers the flexibility to get exactly what their facility needs without the delays.

With the addition of a press brake, plasma table, and pipe bender, our team can design and fabricate steel components faster and with greater precision than ever before. Bringing these capabilities in-house means shorter lead times, faster adjustments, and the ability to respond quickly when projects evolve in the field.

Whether you're tackling a retrofit, expansion, or a completely custom ventilation challenge, VES-Artex can build the components needed to keep your project moving. Our engineering, service, and installation teams work together to ensure every piece fits properly and performs exactly as intended once it's in the barn.

Custom solutions. Faster turnaround. Built for the realities of the farm.

What custom project can we start for you today?

Precision lighting supports peak animal performance by aligning light delivery with physiological needs throughout every season.

A modern, animal-centric lighting strategy uses energy-efficient LED industrial fixtures engineered to match a cow's core retinal sensitivity—providing up to 16 hours of optimized light per day to promote comfort, productivity, and overall well-being.

Lighting in your barn is a strategic investment influencing animal health, staff safety, regulatory compliance, and financial success. By choosing the right barn lighting solutions and implementing them effectively, dairy producers can create a brighter and more prosperous future for their business and herd.

WHAT ARE THE BENEFITS OF PROPER LIGHTING?

Animal Well-Being

Proper lighting enables staff to monitor and clean all areas effectively, preventing contaminated milk and lowering somatic cell counts. Animals experience improved health, increased feed intake, and better growth rates.

Staff Safety & Morale

Well-lit environments enhance staff safety, boost morale, and increase job retention rates as they can continue to reach specific quotas and hit bonuses. If staff members can see what they're doing, they can work quickly and efficiently.

Compliance & Regulation

By meeting governmental regulations and safety guidelines, lighting solutions ensure compliance, which ensures you don't have to waste money on fines and fees. Thus, enhancing the farm's reputation and financial performance.

AGM5 PEAK ARRAY

The AGM5 Peak Array is the new release of the AGM3. It still has the namesake “peak” which keeps birds from nesting on top. The Peak Array is constructed from durable, corrosion-resistant aluminum. It is UL Listed with an IP65 rating. All units are dimmable which means they are easily incorporated into any long-day lighting strategy.

After the peak, the most noticeable physical component of this light is its square shape. This unique design spreads the light in a wide footprint which reduces hot spots, shadows, and glare for the herd. Without these stressors, the herd is more relaxed. The AGM5 differs from the AGM3 in that the LED lights are positioned at an angle, furthering the wide footprint.

Product Details

- Color Temperature: 5000K
- Ratings: IP65, UL, DLC Premium
- Warranty: 6 years
- 6kV combi-wave surge rating per ANSI C82.77-5 CAT C
- Optional electrical insulation to isolate from metal roofing
- Housing is reusable at the end of LED's life

Item Number	Fixture Watts	Maximum Lumen Output	Lumens per Watt (lm/W)	Voltage	Dimmable	Order Online

HIGH BAY LIGHTING

AGM3 PEAK ARRAY

The premier high bay lighting solution for dairy barns. The body style features its namesake “peak” which keeps birds from nesting on top. The Peak Array is constructed from durable, corrosion-resistant aluminum. It is UL Listed with an IP65 rating. All units are dimmable which means they are easily incorporated into any long-day lighting strategy.

After the peak, the most noticeable physical component of this light is its square shape. This unique design spreads the light in a wide footprint which reduces hot spots, shadows, and glare for the herd. Without these stressors, the herd is more relaxed.

OPTIMAL ARRAY

This is the optimal premium LED high bay light. It is ideal for long-day lighting systems and uses fewer fixtures than other inexpensive lights. Its unique design is perfect for “dusty” locations like the freestall areas. The heat sink allows for the top to be smooth, so birds cannot nest on the fins. Premium efficiency, premium life and premium light spread makes it an ideal choice for the dairy industry.

The Optimal Array is a tier above all other UFO or circular style lights because it uses energy more efficiently and its internal components have more durable construction.

Product Details

- Color Temperature: 5000K
- Power Factor: >0.95

HIGH BAY LIGHTING

UFO HIGH BAY LIGHT

The VES-Artex UFO High Bay Light delivers powerful, uniform illumination designed to meet the demanding conditions of dairy barns and livestock facilities. Its compact, round design provides excellent light distribution across large areas while minimizing shadows and dark zones that can disrupt herd movement and behavior.

Constructed with a rugged, corrosion-resistant housing and sealed against dust and moisture, the UFO High Bay Light is engineered for reliable, long-term operation in harsh agricultural environments. Its energy-efficient LED technology reduces operating costs.

Product Details

- Color Temperature: 5000K, 5700K
- Ratings: IP65, ETL, UL, DLC Premium
- Warranty: 5 years
- High-efficiency LED output (24,000 lumens) for reduced energy consumption
- Compact, sealed housing for durability in agricultural environments
- Compatible with dimming controls for automated lighting strategies

Item Number	Fixture Watts	Maximum Lumen Output	Lumens per Watt (lm/W)	Voltage	Dimmable	Order Online

104463	200 W	24,000	160	277-480 V	0-10V Dimmable	✓

ECO UFO LED LIGHT

The VES-Artex Eco UFO LED Light delivers dependable, energy-efficient illumination for dairy barns, livestock housing, and agricultural buildings. Its compact, round design provides consistent light coverage that improves visibility while minimizing shadows and glare. Proper lighting helps support cow comfort, natural activity patterns, and effective long-day lighting programs that contribute to herd productivity and overall facility performance.

Built with durability in mind, the Eco UFO LED Light features a corrosion-resistant housing and sealed components to withstand harsh barn environments. Its high-efficiency LED technology reduces energy consumption and maintenance costs, making it a practical, cost-effective solution for both new installations and retrofit projects.

Product Details

- Color Temperature: 4000K, 5000K, 5700K
- Ratings: IP65, UL Listed, CUL, DLC
- Warranty: 5 years
- Operational Temperature: -32° to 140° F, -36° to 60° C
- Energy-efficient LED design reduces operating costs
- Durable, sealed housing for long service life
- Compatible with automated and long-day lighting control systems

LOW BAY LIGHTING

AURORA ARRAY

The VES-Artex Aurora Array low baylight is engineered to deliver consistent, comfortable illumination in dairy barns, calf facilities, parlors, and other low-mount applications. Its low-profile design distributes light evenly across the pen, reducing shadows and glare that can cause stress and hesitation in livestock. By creating a calm, well-lit environment, the Aurora Array supports cow comfort, safe movement, and optimized production.

The Aurora Array is our leading tri-proof linear light. Tri-proof lights are moisture, corrosion, and explosion-proof. Ideal for ceilings 14' (4.3m) and under, this light makes a big impact. Completely sealed and safe to use in harsh environments, it can be used in the parlor, walkways, and low bay areas. The aluminum housing allows heat to escape quickly which extends the life of each unit.

Product Details

- Color Temperature: 3000K, 4000K, 5000K
- Efficacy: 120/140/160 lumens per watt
- All units are 1 – 10 V dimmable
- All units are 120 – 277 Volt
- Ratings: IP65, ETL, CE, RoHS, UL Listed, DLC
- Warranty: 5 years
- Operational Temperature: -30° to 112° F, -30° to 45° C
- Low-profile design ideal for lower mounting heights
- Energy-efficient LED reduces operating costs
- Compatible with automated lighting control systems

ECO VAPOR TIGHT LED

A dependable low bay lighting solution built for demanding agricultural and industrial environments. The VES-Artex Eco Vapor Tight LED is ideal for offices, hallways, equipment rooms, workshops, utility areas, and low-clearance barns where moisture, dust, and debris are common.

Designed with a wide 110° beam angle, this fixture delivers broad, even light distribution—reducing shadows and minimizing the number of fixtures required for full coverage. Its slim, enclosed profile helps protect internal components from moisture and airborne contaminants, making it a smart choice for livestock facilities and wash-down areas.

Constructed with durable extruded opal prismatic housing and UV protection, the Eco Vapor Tight LED ensures long-lasting performance and consistent light quality in harsh environments.

Product Details

- Color Temperature: 3000K/4000K/5000K

Precision lighting to optimize animal health and productivity

A strategic LED lighting system provides the right amount of light to optimize animal well-being and maximize productivity. Automating the lighting system saves you money, time, and gives you peace of mind knowing that your herd is benefiting from the lighting strategy.

Short-day lighting is defined 6-8 hours of brightness a day with 20-foot candles (220 Lux.)

When short-day lighting is used during the dry period, research shows milk production increases in the first 120 days-in-milk compared to lighting the barn for 12 hours per day.

Long-day lighting is defined as 16-18 hours of brightness a day with 20-foot candles (220 Lux.)

When long-day lighting is used for growing heifers and lactating animals, research shows increased milk production, reproduction, feed efficiency, and better heifer growth compared to lighting the barn 12 hours a day, or less during short winter days.

HYGIENE ARRAY

Our Hygiene Array is a low-profile, impact resistant (IK10 certified) linear light producing up to 8,000 lumens for use primarily in parlors. Mount it on the butt tray of a parallel parlor or the water ring of a rotary parlor. Their low-profile housing IK10 impact certification ensures their durability in harsh environments.

The plug-and-play quick connectors and cabling provide an easy installation process. Use a single luminaire or connect up to 80' (24.4m) luminaires in a single run. Designed with an embedded aluminum heatsink for cooling, each light lasts longer in hot and cold environments than other LED and incandescent lights. The Hygiene Array is superior chemical and UV resistant with an IP68/IP69K rating. Stainless mounting brackets provide reliable installation and the connection wiring cable lengths are available from 1' to 20' (0.3m to 6m).

Product Details

- Color Temperature: 5000K
- Efficacy: Up to 160 LPW
- Voltage: 120-277V
- IP Ratings: IP68, IP69K, UL, NEMA4X, NEMA 6P, DLC Premium
- Warranty: 5 years
- Delivered light output: Up to 8,000 lumens
- Run length can extend up to 80' (24.4m) of luminaires, not including jumpers.
- Operation Temperature: -40°F to 131°F (-40°C to 55°C)

Item Number	Fixture	Maximum Lumen Output	Lumens per Watt (lm/W)	Voltage
115574	2 FT - Single End	2,000	160	120/277 V
115575	2 FT- Dual End	2,000	160	120/277 V
115576	4 FT - Single End	4,000	160	120/277 V
115577	4 FT - Dual End	4,000	160	120/277 V
115578	6 FT - Single End	6,000	160	120/277 V
115579	6 FT - Dual End	6,000	160	120/277 V
115580	8 FT - Single End	8,000	160	120/277 V
115581	8FT - Dual End	8,000	160	120/277 V

WALL PACK

With advanced LED technology, the wall packs consume significantly less electricity compared to traditional lighting options. They are constructed with high-quality materials to provide reliable outdoor lighting for years, reducing the need for frequent replacements.

The large LED semi-cutoff wall pack light fixture features a high-pressure die-cast aluminum housing and hinged front frame with 1/2" coin plugs with o-rings for conduit & photocell. A bronze powder coat anti-static finish provides years of protection. These wall packs are IP54 rated ensuring their durability and longevity.

Product Details

- Color Temperature: 5000K
- Power Factor: >0.9
- Voltage: 120-277V
- Not dimmable
- IP Ratings: IP54, IP65, CE, UL
- Warranty: 5 years
- Operational Temperature: -13°F to 104°F (-25°C to 40°C)

Item Number	Power (Watt)	Typical Lumen Output	Lumens/Watt	Length		Height		Width		Order Online
				Inch	mm	Inch	mm	Inch	mm

ECO WALL PACK

Economic full-cut wall packs are fantastic lighting choices for outdoor use. With over 3,000 LED chips, these lights have a high transmittance rate to properly illuminate walkways, entryways, warehouses, etc. The full-cut construction minimizes light pollution without compromising illumination. Each unit offers wattage options. There is also a built-in photocell, automatically turning the light on at dusk and off at dawn.

These LED wall packs are constructed with heavy die-cast aluminum alloy housing. They feature a bronze powder coated anti-static finish which provides years of protection. These wall packs are I65 waterproof rated. Wall mount installation hardware is included.

PANELS

ENVIROWALL POLYCARBONATE PANELS

EnviroWall Polycarbonate allows natural light to come through without harmful UV rays. That's right, 35% of sunlight is allowed through, but heat and harmful UV rays are completely denied. Connect light sensors to an overarching lighting control system to leverage natural lighting with the indoor lighting structure. This means indoor lighting will dim and shut off as natural light increases, resulting in big savings on energy and bulb life. The polycarbonate panels are corrosion and impact-resistant which means harsh weather conditions, such as hail, does not damage the panels. They are a cost-effective alternative to steel siding and can also be used as interior baffles.

Item Number	Height		Width		Colors
	Feet	Meters	Feet	Meters	
103282	12'	3.6	49.6"	15.1	Solar Grey
103283	14'	4.3			
103284	16'	4.9			

ACRYLOY PANELS

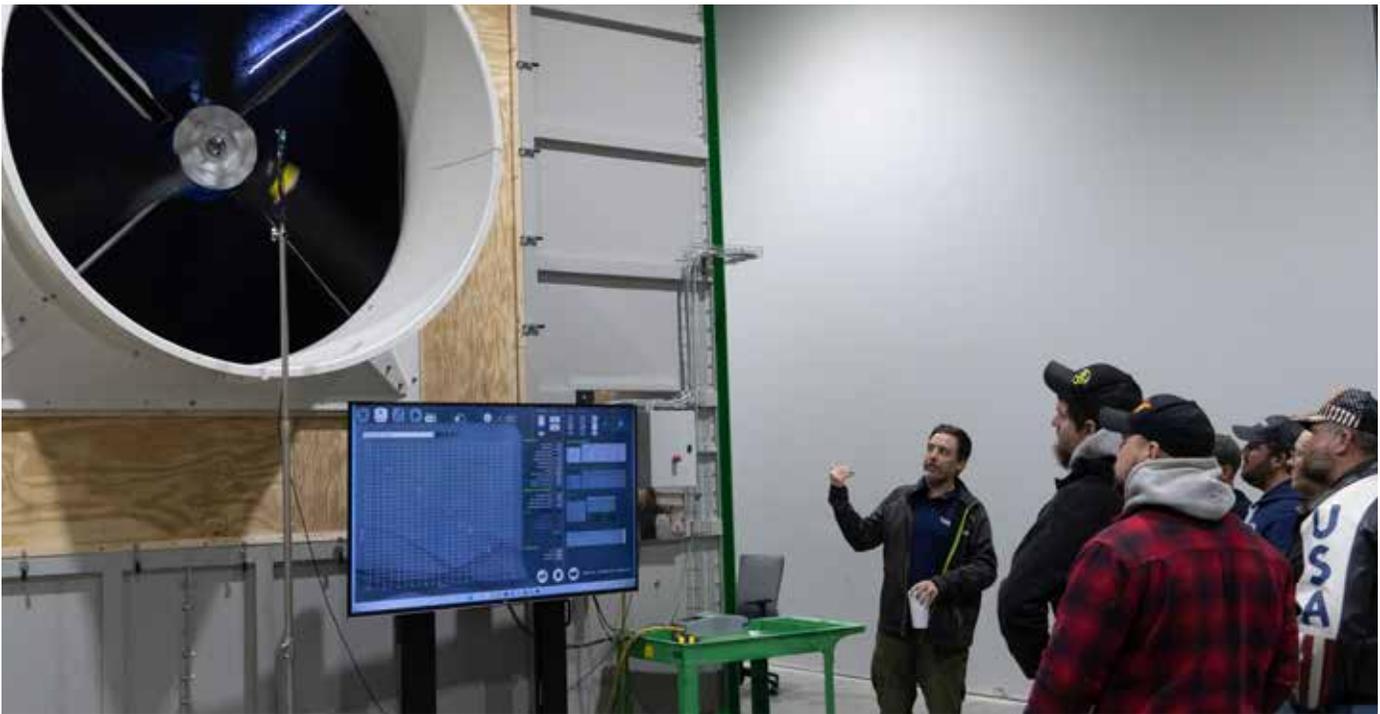

Acryloy panels are a composite matrix of polyester resin and chopped strand fiberglass reinforcement. This glass reinforcement is multi-directional and provides equal strength in all directions. The ability to absorb various forces without damage to its structural integrity is critical to the long-term performance of the panels. Acryloy panels are about 0.060" (1.5cm) thick.

Product Details

- The conductivity (K factor) ASTM C177 is 1.04. The resulting U-value for the panel is 17.3.
- The resulting R-value is 0.058.

Item Number	Description
115323	Siding Panel, Acryloy, 7.2 x 1.5 Profile x 46.5"
115397	Screw - Hex - Acryloy & Metal x 1-1/4", TEKS, (100 Pc/Pkgs)
115398	Screw - Hex - Acryloy & Wood x 1-1/2", TEKS, (100 Pc/Pkgs)
115399	Screw - Hex - Acryloy, Lap/Seam Fastener x 1-1/4", (100 Pc/Pkgs)
115400	Closure Strips, Acryloy, 7.2 x 36"

Built on Proof, Not Promises

At VES-Artex, performance isn't assumed—it's tested.

Our state-of-the-art ventilation test chamber allows our engineering team to evaluate airflow, pressure, efficiency, and durability under controlled conditions before a product ever reaches the barn. Every fan, ventilation component, and airflow solution is measured against real-world performance standards to ensure it delivers the airflow and reliability dairy producers depend on.

By testing ventilation systems in a controlled environment, we can fine-tune designs, improve efficiency, and validate performance across a wide range of operating conditions. The result is equipment that performs exactly as expected once it's installed in the field—helping maintain consistent barn climates, improve cow comfort, and support herd productivity.

Innovation doesn't happen by accident. It happens in the lab before it ever reaches your barn.

VES-Artex. Tested. Proven. Built for the realities of dairy ventilation.

Protecting herd health starts at the point of entry. Effective biosecurity protocols are essential to prevent the introduction and spread of pathogens that can impact animal welfare, milk production, and overall farm profitability. Every person, vehicle, and piece of equipment that enters your facility has the potential to carry contaminants, making prevention a critical component of modern dairy management.

VES-Artex Biosecurity solutions are designed to help producers establish clear sanitation procedures and maintain cleaner, safer environments. From sanitation stations that promote proper hygiene to durable tools engineered for daily cleaning and maintenance, our products support proactive disease prevention and operational efficiency.

By integrating biosecurity practices into your daily routine, you can reduce health risks, protect your investment, and ensure long-term performance from your herd. VES-Artex provides the reliable, easy-to-use equipment you need to make biosecurity a seamless part of your operation.

SANITATION STATION

The VES-Artex Sanitation Station provides a centralized, organized solution to help staff and visitors follow proper hygiene protocols before entering or exiting animal areas. By creating a dedicated space for cleaning and disinfecting footwear, tools, and hands, the Sanitation Station helps reduce the risk of introducing and spreading harmful pathogens within your facility.

Designed for durability in harsh agricultural environments, each station is constructed from corrosion-resistant materials and built to withstand daily use. Its practical layout keeps essential sanitation supplies accessible and visible, encouraging routine compliance and making biosecurity procedures easy to follow.

Whether installed at barn entrances, calf areas, or transition zones, the VES-Artex Sanitation Station supports herd health, protects productivity, and reinforces your commitment to a clean, well-managed operation.

Item Number: 119096

HEAVY-DUTY SCRAPER

Built to handle the toughest cleaning jobs, the VES-Artex Heavy-Duty Scraper aids in maintaining a clean, biosecure facility. Designed to efficiently remove manure, mud, bedding, and organic buildup, this scraper helps reduce pathogen load in high-traffic areas such as entryways, feed lanes, and sanitation stations.

Constructed with a durable, corrosion-resistant blade and a rugged handle, the Heavy-Duty Scraper delivers reliable performance in harsh agricultural environments. Its wide scraping surface allows staff to clean boots, equipment, and concrete surfaces quickly and effectively, supporting daily hygiene protocols without damaging flooring.

Item Number:

24" 119171

30" 119172

SCRUB BRUSH

Complete your sanitation routine with the VES-Artex Scrub Brush, designed to deliver detailed, effective cleaning. Ideal for boots, tools, and equipment, this brush helps remove stubborn organic material that can harbor bacteria and pathogens, supporting a stronger biosecurity program.

Durable, stiff bristles are engineered to loosen and remove debris without excessive wear, while the corrosion-resistant construction ensures dependable performance in demanding agricultural environments. Compact and easy to handle, the scrub brush allows staff and visitors to thoroughly clean critical contact points before entering or exiting animal areas.

Item Number: 119173

With 50+ years of experience serving the agricultural industry, VES-Artex is a proven global technology solutions provider for environmental systems and we can't wait to connect with you! Let's build solutions together! Call **888-622-2999** or visit **ves-artex.com** for more info.
